

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
<p>Chapter 1 Reference</p> <p>Definition</p>	<p style="text-align: center;">INTERNATIONAL STANDARDS AND RECOMMENDED PRACTICES</p> <p style="text-align: center;">CHAPTER 1. DEFINITIONS</p> <p>When the following terms are used in the Standards and Recommended Practices for operation of aircraft in international commercial air transport, they have the following meanings:</p> <p><i>Accelerate-stop distance available (ASDA).</i> The length of the take-off run available plus the length of stopway, if provided.</p>	<p>Civil Aviation Rules (CAR) Part 1.</p>	<p>No Difference</p>		<p>Note: all Civil Aviation Rules, ACs and the Civil Aviation Act are available on the CAANZ web site, http://www.caa.govt.nz. AIPNZ is available on http://www.aip.net.nz.</p>
<p>Chapter 1 Reference</p> <p>Definition</p>	<p><i>Advanced aircraft.</i> An aircraft with equipment in addition to that required for a basic aircraft for a given take-off, approach or landing operation.</p>	<p>CARs</p>	<p>Different in character or other means of compliance</p>	<p>Different in character</p>	

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	<i>Aerial work.</i> An aircraft operation in which an aircraft is used for specialized services such as agriculture, construction, photography, surveying, observation and patrol, search and rescue, aerial advertisement, etc.	CAR Part 1.	Different in character or other means of compliance	This term is no longer used in New Zealand, and has been replaced by "Commercial transport operations".	What the Annex defines as a "Commercial air transport operation" is an "Air transport operation" in the New Zealand rules.
Chapter 1 Reference Definition	<i>Aerodrome.</i> A defined area on land or water (including any buildings, installations and equipment) intended to be used either wholly or in part for the arrival, departure and surface movement of aircraft.	CAR Part 1.	No Difference		
Chapter 1 Reference Definition	<i>Aerodrome operating minima.</i> The limits of usability of an aerodrome for: a) take-off, expressed in terms of runway visual range and/or visibility and, if necessary, cloud conditions; b) landing in 2D instrument approach operations, expressed in terms of visibility and/or runway visual range, minimum descent altitude/height (MDA/H) and, if necessary, cloud conditions; and c) landing in 3D instrument approach operations, expressed in terms of visibility and/or runway visual range and decision altitude/height (DA/H) as appropriate to the type and/or category of the operation.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	Aeroplane. A power-driven heavier-than-air aircraft, deriving its lift in flight chiefly from aerodynamic reactions on surfaces which remain fixed under given conditions of flight.	CAR Part 1.	No Difference		
Chapter 1 Reference Definition	Agreement summary. When an aircraft is operating under an Article 83 <i>bis</i> agreement between the State of Registry and another State, the agreement summary is a document transmitted with the Article 83 <i>bis</i> Agreement registered with the ICAO Council that identifies succinctly and clearly which functions and duties are transferred by the State of Registry to that other State. <i>Note.— The other State in the above definition refers to the State of the Operator for commercial air transport operations.</i>	CARs	No Difference	nil	nil
Chapter 1 Reference Definition	Aircraft. Any machine that can derive support in the atmosphere from the reactions of the air other than the reactions of the air against the earth's surface.	Civil Aviation Act 1990 (CA Act 1990); CAR Part 1.	No Difference		
Chapter 1 Reference Definition	Aircraft operating manual. A manual, acceptable to the State of the Operator, containing normal, abnormal and emergency procedures, checklists, limitations, performance information, details of the aircraft systems and other material relevant to the operation of the aircraft. <i>Note.— The aircraft operating manual is part of the operations manual.</i>	CAR Part 1.	Different in character or other means of compliance	"Flight manual" is the equivalent term.	

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	<i>Aircraft tracking.</i> A process, established by the operator, that maintains and updates, at standardized intervals, a ground-based record of the four dimensional position of individual aircraft in flight.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	To be developed before the applicability date of 8 Nov 18.
Chapter 1 Reference Definition	<i>Air operator certificate (AOC).</i> A certificate authorizing an operator to carry out specified commercial air transport operations.	CAR Part 1.	No Difference		Note: the requirements are specified in CAR Part 119.
Chapter 1 Reference Definition	<i>Air traffic service (ATS).</i> A generic term meaning variously, flight information service, alerting service, air traffic advisory service, air traffic control service (area control service, approach control service or aerodrome control service).	CAR Part 1.	No Difference		
Chapter 1 Reference Definition	<i>Airworthy.</i> The status of an aircraft, engine, propeller or part when it conforms to its approved design and is in a condition for safe operation.	CAR Part 1.	No Difference		Note: "airworthy condition."

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
<p>Chapter 1 Reference</p> <p>Definition</p>	<p>Alternate aerodrome. An aerodrome to which an aircraft may proceed when it becomes either impossible or inadvisable to proceed to or to land at the aerodrome of intended landing where the necessary services and facilities are available, where aircraft performance requirements can be met and which is operational at the expected time of use. Alternate aerodromes include the following:</p> <p><i>Take-off alternate.</i> An alternate aerodrome at which an aircraft would be able to land should this become necessary shortly after take-off and it is not possible to use the aerodrome of departure.</p> <p><i>En-route alternate.</i> An alternate aerodrome at which an aircraft would be able to land in the event that a diversion becomes necessary while en route.</p> <p><i>Destination alternate.</i> An alternate aerodrome at which an aircraft would be able to land should it become either impossible or inadvisable to land at the aerodrome of intended landing.</p> <p><i>Note.— The aerodrome from which a flight departs may also be an en-route or a destination alternate aerodrome for that flight.</i></p>	<p>CAR Part 1.</p>	<p>No Difference</p>		
<p>Chapter 1 Reference</p> <p>Definition</p>	<p>Altimetry system error (ASE). The difference between the altitude indicated by the altimeter display, assuming a correct altimeter barometric setting, and the pressure altitude corresponding to the undisturbed ambient pressure.</p>	<p>Advisory Circular AC91-4, 4, Definitions.</p>	<p>No Difference</p>		

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	<i>Appropriate airworthiness requirements.</i> The comprehensive and detailed airworthiness codes established, adopted or accepted by a Contracting State for the class of aircraft, engine or propeller under consideration.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined, but the relevant NZCARs are Parts 21 and 26.	
Chapter 1 Reference Definition	<i>Appropriate ATS authority.</i> The relevant authority designated by the State responsible for providing air traffic services in the airspace concerned.				
Chapter 1 Reference Definition	<i>Area navigation (RNAV).</i> A method of navigation which permits aircraft operation on any desired flight path within the coverage of ground- or space-based navigation aids or within the limits of the capability of self-contained aids, or a combination of these. <i>Note.— Area navigation includes performance-based navigation as well as other operations that do not meet the definition of performance-based navigation.</i>	CAR Part 1.	No Difference		
Chapter 1 Reference Definition	<i>Basic aircraft.</i> An aircraft which has the minimum equipment required to perform the intended take-off, approach or landing operation.	CARs	Different in character or other means of compliance	Different in character	Policy work is to be carried out to determine if rule change is necessary or alternatively if other arrangements (such as other means of compliance) can be made to achieve the same objective.

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	Cabin crew member. A crew member who performs, in the interest of safety of passengers, duties assigned by the operator or the pilot-in-command of the aircraft, but who shall not act as a flight crew member.	CAR Part 1.	Different in character or other means of compliance	"Flight Attendant" is the equivalent term.	
Chapter 1 Reference Definition	COMAT. Operator material carried on an operator's aircraft for the operator's own purposes.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	
Chapter 1 Reference Definition	Combined vision system (CVS). A system to display images from a combination of an enhanced vision system (EVS) and a synthetic vision system (SVS).	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	
Chapter 1 Reference Definition	Commercial air transport operation. An aircraft operation involving the transport of passengers, cargo or mail for remuneration or hire.	CAR Part 1.	Different in character or other means of compliance	An operation requiring an AOC is an "air operation", which may be an "air transport operation", a "commercial transport operation" or an "adventure aviation operation".	Note: commercial transport operations are largely what was previously known as aerial work.

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	Configuration deviation list (CDL). A list established by the organization responsible for the type design with the approval of the State of Design which identifies any external parts of an aircraft type which may be missing at the commencement of a flight, and which contains, where necessary, any information on associated operating limitations and performance correction.	CAR 91.539; CAR 121.353.	Different in character or other means of compliance	This function is covered by a minimum equipment list (MEL) which is derived from the master minimum equipment list, modified locally and approved by the Airworthiness Unit.	
Chapter 1 Reference Definition	Contaminated runway. A runway is contaminated when a significant portion of the runway surface area (whether in isolated areas or not) within the length and width being used is covered by one or more of the substances listed in the runway surface condition descriptors. <i>Note.— Further information on runway surface condition descriptors can be found in the Annex 14, Volume I — Definitions.</i>		Not Applicable		Amendment 40-C, applicable 5 Nov 20. To be considered for implementation before the applicable date.
Chapter 1 Reference Definition	Continuing airworthiness. The set of processes by which an aircraft, engine, propeller or part complies with the applicable airworthiness requirements and remains in a condition for safe operation throughout its operating life. ----- . The manuals referenced will be updated as necessary to harmonize the terminology with that used in the new Annex 19. . The manuals referenced will be updated as necessary to harmonize the terminology with that used in the new Annex 19.	CAR Part 1.	Less protective or partially implemented or not implemented	Not specifically defined.	Common usage term.

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	Continuing airworthiness records. Records which are related to the continuing airworthiness status of an aircraft, engine, propeller or associated part.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	Note: the relevant rule is 91.617, maintenance records.
Chapter 1 Reference Definition	Continuous descent final approach (CDFA). A technique, consistent with stabilized approach procedures, for flying the final approach segment (FAS) of an instrument non-precision approach (NPA) procedure as a continuous descent, without level-off, from an altitude/height at or above the final approach fix altitude/height to a point approximately 15 m (50 ft) above the landing runway threshold or the point where the flare manoeuvre begins for the type of aircraft flown; for the FAS of an NPA procedure followed by a circling approach, the CDFA technique applies until circling approach minima (circling OCA/H) or visual flight manoeuvre altitude/height are reached.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	
Chapter 1 Reference Definition	Crew member. A person assigned by an operator to duty on an aircraft during a flight duty period.	CAR Part 1.	No Difference		See also "flight crew member".
Chapter 1 Reference Definition	Cruise relief pilot. A flight crew member who is assigned to perform pilot tasks during cruise flight, to allow the pilot-in-command or a co-pilot to obtain planned rest.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	Cruising level. A level maintained during a significant portion of a flight.	CAR Part 1.	No Difference		
Chapter 1 Reference Definition	Current flight plan (CPL). The flight plan that reflects changes to the filed flight plan, if any, by subsequent ATC clearances.				
Chapter 1 Reference Definition	Dangerous goods. Articles or substances which are capable of posing a risk to health, safety, property or the environment and which are shown in the list of dangerous goods in the Technical Instructions or which are classified according to those Instructions. <i>Note.— Dangerous goods are classified in Annex 18, Chapter 3.</i>	CA Act 1990; CAR Part 1.	No Difference		

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
<p>Chapter 1 Reference</p> <p>Definition</p>	<p>Decision altitude (DA) or decision height (DH). A specified altitude or height in a 3D instrument approach operation at which a missed approach must be initiated if the required visual reference to continue the approach has not been established.</p> <p><i>Note 1.— Decision altitude (DA) is referenced to mean sea level and decision height (DH) is referenced to the threshold elevation.</i></p> <p><i>Note 2.— The required visual reference means that section of the visual aids or of the approach area which should have been in view for sufficient time for the pilot to have made an assessment of the aircraft position and rate of change of position, in relation to the desired flight path. In Category III operations with a decision height the required visual reference is that specified for the particular procedure and operation.</i></p> <p><i>Note 3.— For convenience where both expressions are used they may be written in the form “decision altitude/height” and abbreviated “DA/H”.</i></p>	<p>CAR Part 1.</p>	<p>No Difference</p>		<p>Note: the rule definitions for DA and DH still refer to precision approach rather than 3D approach, but 2D and 3D instrument approach operations are also now defined separately.</p>
<p>Chapter 1 Reference</p> <p>Definition</p>	<p>Dry runway. A runway is considered dry if its surface is free of visible moisture and not contaminated within the area intended to be used.</p>	<p>CAR Part 1.</p>	<p>No Difference</p>		

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	Duty. Any task that flight or cabin crew members are required by the operator to perform, including, for example, flight duty, administrative work, training, positioning and standby when it is likely to induce fatigue.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	
Chapter 1 Reference Definition	Duty period. A period which starts when a flight or cabin crew member is required by an operator to report for or to commence a duty and ends when that person is free from all duties.	AC119-2.	No Difference		
Chapter 1 Reference Definition	EDTO critical fuel. The fuel quantity necessary to fly to an en-route alternate aerodrome considering, at the most critical point on the route, the most limiting system failure. <i>Note.— Guidance on EDTO critical fuel scenarios is contained in the Extended Diversion Time Operations (EDTO) Manual (Doc 10085).</i>	CAR Part 1.	Less protective or partially implemented or not implemented	Not specifically defined.	EDTO rules are listed in CAR Part 121, Subpart N.
Chapter 1 Reference Definition	EDTO significant system. An aeroplane system whose failure or degradation could adversely affect the safety particular to an EDTO flight, or whose continued functioning is specifically important to the safe flight and landing of an aeroplane during an EDTO diversion.	CAR Part 1.	No Difference		

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	<p>Electronic flight bag (EFB). An electronic information system, comprised of equipment and applications for flight crew, which allows for the storing, updating, displaying and processing of EFB functions to support flight operations or duties.</p>	AC91-20, Guidelines for the Approval and Use of Electronic Flight Bags.	No Difference		
Chapter 1 Reference Definition	<p>Emergency locator transmitter (ELT). A generic term describing equipment which broadcast distinctive signals on designated frequencies and, depending on application, may be automatically activated by impact or be manually activated. An ELT may be any of the following:</p> <p><i>Automatic fixed ELT (ELT(AF)).</i> An automatically activated ELT which is permanently attached to an aircraft.</p> <p><i>Automatic portable ELT (ELT(AP)).</i> An automatically activated ELT which is rigidly attached to an aircraft but readily removable from the aircraft.</p> <p><i>Automatic deployable ELT (ELT(AD)).</i> An ELT which is rigidly attached to an aircraft and which is automatically <i>deployed</i> and activated by impact, and, in some cases, also by hydrostatic sensors. Manual deployment is also provided.</p> <p><i>Survival ELT (ELT(S)).</i> An ELT which is removable from an aircraft, stowed so as to facilitate its ready use in an <i>emergency</i>, and manually activated by survivors.</p>	CAR Part 1.	Less protective or partially implemented or not implemented	ELT(AD) not separately defined.	

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	Engine. A unit used or intended to be used for aircraft propulsion. It consists of at least those components and equipment necessary for functioning and control, but excludes the propeller/rotors (if applicable).	CAR Part 1.	No Difference		Note: "aircraft engine".
Chapter 1 Reference Definition	Enhanced vision system (EVS). A system to display electronic real-time images of the external scene achieved through the use of image sensors. <i>Note.— EVS does not include night vision imaging systems (NVIS).</i>	CAR Part 1.	Less protective or partially implemented or not implemented	Not specifically defined.	
Chapter 1 Reference Definition	Extended diversion time operations (EDTO). Any operation by an aeroplane with two or more turbine engines where the diversion time to an en-route alternate aerodrome is greater than the threshold time established by the State of the Operator.	CAR Part 1.	No Difference		
Chapter 1 Reference Definition	Fatigue. A physiological state of reduced mental or physical performance capability resulting from sleep loss, extended wakefulness, circadian phase, and/or workload (mental and/or physical activity) that can impair a person's alertness and ability to perform safety-related operational duties.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	Common usage term.
Chapter 1 Reference Definition	Fatigue Risk Management System (FRMS). A data-driven means of continuously monitoring and managing fatigue-related safety risks, based upon scientific principles and knowledge as well as operational experience that aims to ensure relevant personnel are performing at adequate levels of alertness.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	<p>Filed flight plan (FPL or eFPL). The latest flight plan as submitted by the pilot, an operator or a designated representative for use by ATS units.</p> <p><i>Note.— The FPL denotes a filed flight plan exchanged using aeronautical fixed service while eFPL denotes a filed flight plan exchanged using flight and flow – information for a collaborative environment (FF-ICE) services. The eFPL allows for the exchange of additional information not contained within the FPL.</i></p>				
Chapter 1 Reference Definition	<p>Final approach segment (FAS). That segment of an instrument approach procedure in which alignment and descent for landing are accomplished.</p>	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	
Chapter 1 Reference Definition	<p>Flight crew member. A licensed crew member charged with duties essential to the operation of an aircraft during a flight duty period.</p>	CAR Part 1.	Different in character or other means of compliance	Flight crew member means an appropriately qualified person assigned by the operator for duty in an aircraft during flight time as a pilot or flight engineer.	See also "crew member".
Chapter 1 Reference Definition	<p>Flight data analysis. A process of analysing recorded flight data in order to improve the safety of flight operations.</p>	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	Flight duty period. A period which commences when a flight or cabin crew member is required to report for duty that includes a flight or a series of flights and which finishes when the aircraft finally comes to rest and the engines are shut down at the end of the last flight on which he/she is a crew member.	AC119-2.	No Difference		
Chapter 1 Reference Definition	Flight manual. A manual, associated with the certificate of airworthiness, containing limitations within which the aircraft is to be considered airworthy, and instructions and information necessary to the flight crew members for the safe operation of the aircraft.	CAR Part 1.	No Difference		
Chapter 1 Reference Definition	Flight operations officer/flight dispatcher. A person designated by the operator to engage in the control and supervision of flight operations, whether licensed or not, suitably qualified in accordance with Annex 1, who supports, briefs and/or assists the pilot-in-command in the safe conduct of the flight.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	
Chapter 1 Reference Definition	Flight plan. Specified information relative to an intended flight or portion of a flight of an aircraft. <i>Note 1.— The term flight plan may be prefixed by the words “preliminary”, “filed”, “current” or “operational” to indicate the context and different stages of a flight.</i> <i>Note 2.— When the word “message” is used as a suffix to this term, it denotes the content and format of the flight plan data as transmitted.</i>	CAR Part 1.	No Difference		

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	<p>Flight recorder. Any type of recorder installed in the aircraft for the purpose of complementing accident/incident investigation.</p> <p><i>Automatic deployable flight recorder (ADFR).</i> A combination flight recorder installed on the aircraft which is capable of automatically deploying from the aircraft.</p>	CARs.	Less protective or partially implemented or not implemented	Not specifically defined, but the requirements are detailed in CARs 121.371, 121.372, 125.367, and 125.369. ADFR is not defined.	Common usage.
Chapter 1 Reference Definition	<p>Flight safety documents system. A set of interrelated documentation established by the operator, compiling and organizing information necessary for flight and ground operations, and comprising, as a minimum, the operations manual and the operator's maintenance control manual.</p>	CAR Part 119.	Different in character or other means of compliance	CA Rules use the term "exposition".	

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
<p>Chapter 1 Reference</p> <p>Definition</p>	<p>Flight simulation training device. Any one of the following three types of apparatus in which flight conditions are simulated on the ground:</p> <p><i>A flight simulator,</i> which provides an accurate representation of the flight deck of a particular aircraft type to the extent that the mechanical, electrical, electronic, etc. aircraft systems control functions, the normal environment of flight crew members, and the performance and flight characteristics of that type of aircraft are realistically simulated;</p> <p><i>A flight procedures trainer,</i> which provides a realistic flight deck environment, and which simulates instrument responses, simple control functions of mechanical, electrical, electronic, etc. aircraft systems, and the performance and flight characteristics of aircraft of a particular class;</p> <p><i>A basic instrument flight trainer,</i> which is equipped with appropriate instruments, and which simulates the flight deck environment of an aircraft in flight in instrument flight conditions.</p>	<p>CAR Part 1.</p>	<p>Different in character or other means of compliance</p>	<p>Defined under "Synthetic flight trainer".</p>	
<p>Chapter 1 Reference</p> <p>Definition</p>	<p>Flight time — aeroplanes. The total time from the moment an aeroplane first moves for the purpose of taking off until the moment it finally comes to rest at the end of the flight.</p> <p><i>Note.— Flight time as here defined is synonymous with the term “block to block” time or “chock to chock” time in general usage which is measured from the time an aeroplane first moves for the purpose of taking off until it finally stops at the end of the flight.</i></p>	<p>CAR Part 1.</p>	<p>No Difference</p>		

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	General aviation operation. An aircraft operation other than a commercial air transport operation or an aerial work operation.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	New Zealand issues a "General Aviation Air Operator Certificate" under CAR Par 119 authorising the holder to conduct air transport operations or commercial transport operations under CAR Part 135, Air Operations - Helicopters and Small Aeroplanes.
Chapter 1 Reference Definition	Ground handling. Services necessary for an aircraft's arrival at, and departure from, an airport, other than air traffic services.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	Common usage term.
Chapter 1 Reference Definition	Head-up display (HUD). A display system that presents flight information into the pilot's forward external field of view.	CAR Part 1.	Less protective or partially implemented or not implemented	Not specifically defined.	
Chapter 1 Reference Definition	Human Factors principles. Principles which apply to aeronautical design, certification, training, operations and maintenance and which seek safe interface between the human and other system components by proper consideration to human performance.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	Commonly understood term.

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	Human performance. Human capabilities and limitations which have an impact on the safety and efficiency of aeronautical operations.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	Common usage term.
Chapter 1 Reference Definition	Instrument approach operations. An approach and landing using instruments for navigation guidance based on an instrument approach procedure. There are two methods for executing instrument approach operations: a) a two-dimensional (2D) instrument approach operation, using lateral navigation guidance only; and b) a three-dimensional (3D) instrument approach operation, using both lateral and vertical navigation guidance. <i>Note.— Lateral and vertical navigation guidance refers to the guidance provided either by:</i> a) a ground-based radio navigation aid; or b) computer-generated navigation data from ground-based, space-based, self-contained navigation aids or a combination of these.	CAR Part 1.	Different in character or other means of compliance	The definitions precision approach and non-precision approach are still used, but definitions for 2D and 3D instrument approach operations have now been added to Part 1.	

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
<p>Chapter 1 Reference</p> <p>Definition</p>	<p>Instrument approach procedure (IAP). A series of predetermined manoeuvres by reference to flight instruments with specified protection from obstacles from the initial approach fix, or where applicable, from the beginning of a defined arrival route to a point from which a landing can be completed and thereafter, if a landing is not completed, to a position at which holding or en-route obstacle clearance criteria apply. Instrument approach procedures are classified as follows:</p> <p><i>Non-precision approach (NPA) procedure.</i> An instrument approach procedure designed for 2D instrument approach operations Type A.</p> <p><i>Note.— Non-precision approach procedures may be flown using a continuous descent final approach (CDFA) technique. CDFAs with advisory VNAV guidance calculated by on-board equipment are considered 3D instrument approach operations. CDFAs with manual calculation of the required rate of descent are considered 2D instrument approach operations. For more information on CDFAs, refer to PANS-OPS (Doc 8168), Volume I, Part II, Section 5.</i></p> <p><i>Approach procedure with vertical guidance (APV).</i> A performance-based navigation (PBN) instrument approach procedure designed for 3D instrument approach operations Type A.</p> <p><i>Precision approach (PA) procedure.</i> An instrument approach procedure based on navigation systems (ILS, MLS, GLS and SBAS CAT I) designed for 3D instrument approach operations Type A or B.</p> <p><i>Note.— Refer to 4.2.8.3 for instrument approach operation types.</i></p>	<p>CARs, Part 1.</p>	<p>Different in character or other means of compliance</p>	<p>The IAP definition does not currently include the three classifications; precision and non-precision approaches are defined separately, as are 2D and 3D instrument approach operations; and APV is not defined.</p>

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	Low-visibility operations (LVO). Approach operations in RVRs less than 550 m and/or with a DH less than 60 m (200 ft) or take-off operations in RVRs less than 400 m.	CARs	No Difference	nil	nil
Chapter 1 Reference Definition	Maintenance. The performance of tasks on an aircraft, engine, propeller or associated part required to ensure the continuing airworthiness of an aircraft, engine, propeller or associated part including any one or combination of overhaul, inspection, replacement, defect rectification, and the embodiment of a modification or repair.	CAR Part 1.	No Difference		
Chapter 1 Reference Definition	Maintenance programme. A document which describes the specific scheduled maintenance tasks and their frequency of completion and related procedures, such as a reliability programme, necessary for the safe operation of those aircraft to which it applies.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	The requirements are detailed in CAR 91.605, Maintenance programmes and schedules.
Chapter 1 Reference Definition	Maintenance release. A document which contains a certification confirming that the maintenance work to which it relates has been completed in a satisfactory manner in accordance with appropriate airworthiness requirements.	CAR Part 1.	Different in character or other means of compliance	The Technical Log is the equivalent document.	See CAR 91.619.

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	<p>Night. The hours between the end of evening civil twilight and the beginning of morning civil twilight or such other period between sunset and sunrise, as may be prescribed by the appropriate authority.</p> <p><i>Note.— Civil twilight ends in the evening when the centre of the sun's disc is 6 degrees below the horizon and begins in the morning when the centre of the sun's disc is 6 degrees below the horizon.</i></p>	CAR Part 1.	No Difference		
Chapter 1 Reference Definition	<p>Obstacle clearance altitude (OCA) or obstacle clearance height (OCH). The lowest altitude or the lowest height above the elevation of the relevant runway threshold or the aerodrome elevation as applicable, used in establishing compliance with appropriate obstacle clearance criteria.</p> <p><i>Note 1.— Obstacle clearance altitude is referenced to mean sea level and obstacle clearance height is referenced to the threshold elevation or in the case of non-precision approach procedures to the aerodrome elevation or the threshold elevation if that is more than 2 m (7 ft) below the aerodrome elevation. An obstacle clearance height for a circling approach procedure is referenced to the aerodrome elevation.</i></p> <p><i>Note 2.— For convenience when both expressions are used they may be written in the form "obstacle clearance altitude/ height" and abbreviated "OCA/H".</i></p>	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	Operational control. The exercise of authority over the initiation, continuation, diversion or termination of a flight in the interest of the safety of the aircraft and the regularity and efficiency of the flight.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	
Chapter 1 Reference Definition	Operational credit. A credit authorized for operations with an advanced aircraft enabling a lower aerodrome operating minimum than would normally be authorized for a basic aircraft, based upon the performance of advanced aircraft systems utilizing the available external infrastructure.	NIL	Less protective or partially implemented or not implemented	not implemented	
Chapter 1 Reference Definition	Operational flight plan. The operator's plan for the safe conduct of the flight based on considerations of aeroplane performance, other operating limitations and relevant expected conditions on the route to be followed and at the aerodromes concerned.	CAR Part 1.	No Difference		
Chapter 1 Reference Definition	Operations manual. A manual containing procedures, instructions and guidance for use by operational personnel in the execution of their duties.	CAR Part 119.	Different in character or other means of compliance	Considered to be part of the Exposition required by CAR 119.81.	
Chapter 1 Reference Definition	Operations specifications. The authorizations including specific approvals, conditions and limitations associated with the air operator certificate and subject to the conditions in the operations manual.	CAR Part 1.	No Difference

<p>Chapter 3 Reference 3.1.1</p> <p>Standard</p>	<p style="text-align: center;">CHAPTER 3. GENERAL</p> <p><i>Note 1.— Although the Convention on International Civil Aviation allocates to the State of Registry certain functions which that State is entitled to discharge, or obligated to discharge, as the case may be, the Assembly recognized, in Resolution A23-13 that the State of Registry may be unable to fulfil its responsibilities adequately in instances where aircraft are leased, chartered or interchanged — in particular without crew — by the operator of another State and that the Convention may not adequately specify the rights and obligations of the State of the operator in such instances until such time as Article 83 bis of the Convention enters into force. Accordingly, the Council urged that if, in the above-mentioned instances, the State of Registry finds itself unable to discharge adequately the functions allocated to it by the Convention, it delegate to the State of the Operator, subject to acceptance by the latter State, those functions of the State of Registry that can more adequately be discharged by the State of the Operator. It was understood that pending entry into force of Article 83 bis of the Convention the foregoing action would only be a matter of practical convenience and would not affect either the provisions of the Chicago Convention prescribing the duties of the State of Registry or any third State. However, as Article 83 bis of the Convention entered into force on 20 June 1997, such transfer agreements will have effect in respect of Contracting States which have ratified the related Protocol (Doc 9318) upon fulfilment of the conditions established in Article 83 bis.</i></p> <p><i>Note 2.— In the case of international operations effected jointly with aeroplanes not all of which are registered in the same Contracting State, nothing in this Part prevents the</i></p>	<p>CARs 91.751 and 91.753.</p>	<p>No Difference</p>

	<p><i>Note 2. — The required visual reference means that section of the visual aids or of the approach area which should have been in view for sufficient time for the pilot to have made an assessment of the aircraft position and rate of change of position, in relation to the desired flight path. In the case of a circling approach operation, the required visual reference is the runway environment.</i></p> <p><i>Note 3.— Guidance on approach classification as it relates to instrument approach operations, procedures, runways and navigation systems is contained in the Manual of All-Weather Operations (Doc 9365).</i></p>				
<p>Chapter 4 Reference 4.2.8.4</p> <p>Standard</p>	<p>4.2.8.4 The State of the Operator shall issue a specific approval for instrument approach operations in low visibility which shall only be conducted when RVR information is provided.</p> <p><i>Note.— Guidance on low visibility operations is contained in the Manual of All-Weather Operations (Doc 9365).</i></p>	<p>CAR 91.415(a).</p>	<p>No Difference</p>		
<p>Chapter 4 Reference 4.2.8.5</p> <p>Standard</p>	<p>4.2.8.5 For take-off in low visibility, the State of the Operator shall issue a specific approval for the minimum take-off RVR.</p> <p><i>Note.— In general, visibility for take-off is defined in terms of RVR. An equivalent horizontal visibility may also be used.</i></p>	<p>CARs</p>	<p>No Difference</p>	<p>nil</p>	<p>nil</p>

Report on entire Annex

Annex Reference	OPERATION OF AIRCRAFT Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.2.8.6 Recommendation	4.2.8.6 Recommendation. — <i>For instrument approach operations, aerodrome operating minima below 800 m visibility should not be authorized unless RVR information is provided.</i>	CAR 91.415.	Less protective or partially implemented or not implemented	The 800 m criterion is not specified.	
Chapter 4 Reference 4.2.8.7 Standard	4.2.8.7 The operating minima for 2D instrument approach operations using instrument approach procedures shall be determined by establishing a minimum descent altitude (MDA) or minimum descent height (MDH), minimum visibility and, if necessary, cloud conditions. <i>Note.— For guidance on applying a continuous descent final approach (CDFA) flight technique on non-precision approach procedures, refer to PANS-OPS (Doc 8168), Volume I, Part II, Section 5.</i>	CAR Part 1.	Different in character or other means of compliance	MDA/MDH are defined for non-precision approaches; the term 2D is defined separately.	Note: cloud conditions are not specified in any approach minima for NZ aerodromes.
Chapter 4 Reference 4.2.8.8 Standard	4.2.8.8 The operating minima for 3D instrument approach operations using instrument approach procedures shall be determined by establishing a decision altitude (DA) or decision height (DH) and the minimum visibility or RVR.	CAR Part 1.	Different in character or other means of compliance	The DA/DH definition does not include the term 3D but refers instead to precision approach. The term 3D instrument approach operation is defined separately	
Chapter 4 Reference 4.2.9 Standard	4.2.9 Threshold crossing height for 3D instrument approach operations The operator shall establish operational procedures designed to ensure that an aeroplane being used to conduct 3D instrument approach operations crosses the threshold by a safe margin, with the aeroplane in the landing configuration and attitude.	CAR 173.201.	Different in character or other means of compliance	The rule requires all instrument procedures to be designed in accordance with ICAO Docs 8168, 9697, 9365, 9613 and 9881; and Annexes 4, 6, 11, 14 and 15 as applicable.

	aerodrome is situated.				
Chapter 5 Reference 5.2.8 Standard	5.2.8 <i>Take-off</i> . The aeroplane shall be able, in the event of a critical engine failing, or for other reasons, at any point in the take-off, either to discontinue the take-off and stop within the accelerate-stop distance available, or to continue the take-off and clear all obstacles along the flight path by an adequate vertical or horizontal distance until the aeroplane is in a position to comply with 5.2.9. When determining the resulting take-off obstacle accountability area, the operating conditions, such as the crosswind component and navigation accuracy, must be taken into account.	CARs 121.211; 121.213; 125.213; 125.215.	No Difference		
Chapter 5 Reference 5.2.8.1 Standard	5.2.8.1 In determining the length of the runway available, account shall be taken of the loss, if any, of runway length due to alignment of the aeroplane prior to take-off.	CAR Part 121 Subpart D, CAR Part 125 Subpart D.	Less protective or partially implemented or not implemented	Not implemented.	
Chapter 5 Reference 5.2.9 Standard	5.2.9 <i>En route — one-engine-inoperative</i> . The aeroplane shall be able, in the event of the critical engine becoming inoperative at any point along the route or planned diversions therefrom, to continue the flight to an aerodrome at which the Standard of 5.2.11 can be met, without flying below the minimum flight altitude at any point.	CAR 121.215, 125.217.	No Difference

Chapter 5 Reference 5.2.10 Standard	5.2.10 <i>En route — two engines inoperative.</i> In the case of aeroplanes having three or more engines, on any part of a route where the location of en-route alternate aero-dromes and the total duration of the flight are such that the probability of a second engine becoming inoperative must be allowed for if the general level of safety implied by the Standards of this chapter is to be maintained, the aeroplane shall be able, in the event of any two engines becoming inoperative, to continue the flight to an en-route alternate aerodrome and land.	CARs 121.217; 125.219.	No Difference		
Chapter 5 Reference 5.2.11 Standard	5.2.11 <i>Landing.</i> The aeroplane shall, at the aerodrome of intended landing and at any alternate aerodrome, after clearing all obstacles in the approach path by a safe margin, be able to land, with assurance that it can come to a stop or, for a seaplane, to a satisfactorily low speed, within the landing distance available. Allowance shall be made for expected variations in the approach and landing techniques, if such allowance has not been made in the scheduling of performance data. <i>Note.— Guidelines on appropriate margins for the “at time of landing” distance assessment is contained in the Aeroplane Performance Manual (Doc 10064).</i>	CAR 121.221, 121.223, 125.223, 125.225.	No Difference
