Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference	INTERNATIONAL STANDARDS AND RECOMMENDED PRACTICES	AC139-8 Definitions.	No Difference		Note: See comment at Standard 1.2.
Definition	CHAPTER 1. GENERAL				
	Introductory Note.— Annex 14, Volume II, contains Standards and Recommended Practices (specifications) that prescribe the physical characteristics and obstacle limitation surfaces to be provided for at heliports, and certain facilities and technical services normally provided at a heliport. It is not intended that these specifications limit or regulate the operation of an aircraft.				
	When designing a heliport, the critical design helicopter, having the largest set of dimensions and the greatest maximum take-off mass (MTOM) the heliport is intended to serve, would need to be considered. It is to be noted that provisions for helicopter flight				
	operations are contained in Annex 6, Part III. 1.1 Definitions Annex 14, Volume I, contains definitions for the terms which are used in both volumes. Those definitions are not reproduced in this volume, with the exception of the following two, which are included for ease of reference:				
	Heliport. An aerodrome or a defined area on a structure intended to be used wholly or in part for the arrival,

Chapter 1 Reference	<i>Elevated heliport.</i> A heliport located on a raised structure on land.	AC139-8 Definitions.	No Difference		
Definition					
Chapter 1 Reference	<i>Elongated.</i> When used with TLOF or FATO, elongated means an area which has a length more than twice its width.	CAR	No Difference	NIL	NIL
Definition					
Chapter 1 Reference Definition	<i>Final approach and take-off area (FATO).</i> A defined area over which the final phase of the approach manoeuvre to hover or landing is completed and from which the take-off manoeuvre is commenced. Where the FATO is to be used by helicopters operated in performance class 1, the defined area includes the rejected take-off area available.	AC139-8 Definitions.	No Difference		
Chapter 1 Reference Definition	<i>Helicopter clearway.</i> A defined area on the ground or water, selected and/or prepared as a suitable area over which a helicopter operated in performance class 1 may accelerate and achieve a specific height.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	
Chapter 1 Reference Definition	<i>Helicopter stand.</i> A defined area intended to accommodate a helicopter for purposes of: loading or unloading passengers, mail or cargo; fuelling, parking or maintenance; and, where air taxiing operations are contemplated, the TLOF.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.	

Report on entire Annex						
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 1 Reference Definition	<i>Helicopter taxiway.</i> A defined path on a heliport intended for the ground movement of helicopters and that may be combined with an air taxi-route to permit both ground and air taxiing.	CARs.	Less protective or partially implemented or not implemented	Not specifically defined.		
Chapter 1 Reference Definition	 Helicopter taxi-route. A defined path established for the movement of helicopters from one part of a heliport to another. a) Air taxi-route. A marked taxi-route intended for air taxiing. b) Ground taxi-route. A taxi-route centred on a taxiway. 	AC139-8.	Less protective or partially implemented or not implemented	Not specifically defined.		
Chapter 1 Reference Definition	<i>Helideck.</i> A heliport located on a fixed or floating offshore facility such as an exploration and/or production unit used for the exploitation of oil or gas.	AC139-8 Definitions.	No Difference			
Chapter 1 Reference Definition	<i>Heliport elevation.</i> The elevation of the highest point of the FATO.	AC139-8.	Less protective or partially implemented or not implemented	Not specifically defined.

Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 1 Reference 1.2.1 Standard	1.2 Applicability Note.— The dimensions discussed in this Annex are based on consideration of single-main-rotor helicopters. For tandem-rotor helicopters the heliport design will be based on a case-by-case review of the specific models using the basic requirement for a safety area and protection areas specified in this Annex. The specifications of the main chapters of this Annex are applicable for visual heliports that may or may not incorporate the use of a Point-in-space approach or departure. Additional specifications for instrument heliports with non-precision and/or precision approaches and instrument departures are detailed in the Appendix. The specifications of this Annex are not applicable for water heliports (touchdown or lift-off on the surface of the water). 1.2.1 The interpretation of some of the specifications in this Annex expressly requires the exercising of discretion, the taking of a decision or the performance of a function by the appropriate authority. In other specifications, the expression appropriate authority does not actually appear although its inclusion is implied. In both cases, the responsibility for whatever determination or action is necessary shall rest with the State having jurisdiction over the heliport.	AC139-8.	No Difference		Note: New Zealand has no heliports that could be classed as supporting international operations, and heliports are not licensed under the Civil Aviation Rules. However, selected SARPs have been incorporated in Advisory Circular AC139-8. This AC gives guidance for the establishment of heliports in populous areas, and in para 1.1.1, notes that the AC is not exhaustive, referring the reader to Annex 14 Vol II for further guidance. Compliance data for SARPs are referenced mainly to the AC, which is currently being revised.	
Chapter 1 Reference 1.2.2	1.2.2 The specifications in this Annex shall apply to all heliports intended to be used by helicopters in international civil aviation. They shall apply equally to areas for the exclusive use of helicopters at an aerodrome primarily meant for the use of aeroplanes. Where relevant, the provisions of	AC139-6, AC139-8.	No Difference			
Standard	Annex 14, Volume I, shall apply to the helicopter operations being conducted at such an aerodrome.

Chapter 3 Reference 3.1.1	CHAPTER 3. PHYSICAL CHARACTERISTICS	CAR	No Difference	NIL	NIL
Standard	 3.1 Onshore heliports Note 1.— The provisions given in this section are based on the design assumption that no more than one helicopter will be in the FATO at the same time. Note 2.— The design provisions given in this section assume when conducting operations to a FATO in proximity to another FATO, these operations will not be simultaneous. If simultaneous helicopter operations are required, appropriate separation distances between FATOs need to be determined, giving due regard to such issues as rotor downwash and airspace, and ensuring the flight paths for each FATO, defined in Chapter 4, do not overlap. Further guidance on this issue is given in the Heliport Manual (Doc 9261). Note 3.— The provisions given in this section are common for surface-level heliports and elevated heliports unless otherwise specified. Note 4.— Guidance on the minimum size for elevated FATO/TLOF in order to permit facilitation of essential operations around the helicopter is given in the Heliport Manual (Doc 9261). Note 5.— Guidance on structural design to account for the presence on elevated heliports of personnel, snow, freight, and refuelling and firefighting equipment, etc. is given in the Heliport Manual (Doc 9261).

Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.57 Recommendation	 3.1.57 Recommendation.— A FATO should not be located: a) near taxiway intersections or holding points where jet engine efflux is likely to cause high turbulence; or b) near areas where aeroplane vortex wake generation is likely to exist. Table 3-1. FATO minimum separation distance for simultaneous operations 		No Difference		

	Report on entire Annex Annex 14, volume 2, Ann					
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 3 Reference 3.2.1 Standard	3.2 Helidecks Note.— The following specifications are for helidecks located on structures engaged in such activities as mineral exploitation, research or construction. See 3.4 for shipboard heliport provisions. FATOS and TLOFS Note 1.— For helidecks that have a 1 D or larger FATO it is presumed that the FATO and the TLOF will always occupy the same space and have the same load bearing characteristics so as to be coincidental. For helidecks that are less than 1 D, the reduction in size is only applied to the TLOF which is a load bearing area. In this case, the FATO remains at 1 D but the portion extending beyond the TLOF perimeter need not be load bearing for helicopters. The TLOF and the FATO may be assumed to be collocated. Note 2.— Guidance on the effects of airflow direction and turbulence, prevailing wind velocity and high temperatures from gas turbine exhausts or flare-radiated heat on the location of the FATO is given in the Heliport Manual (Doc 9261). Note 3.— Guidance on the design and markings for helideck parking areas is given in the Heliport Manual (Doc 9261). 3.2.1 The specifications in paragraphs 3.3.14 and 3.3.15 shall be applicable for helidecks completed on or after 1	AC139-8, Ch 3.	Less protective or partially implemented or not implemented	Not specified.		

FIFTH EDITION 2020

	Report on entire Annex 14, volume 2, Amendment 9					
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 3 Reference 3.2.2 Standard	3.2.2 A helideck shall be provided with one FATO and one coincident or collocated TLOF.	AC139-8, 3.3.1.	No Difference			
Chapter 3 Reference 3.2.3 Standard	3.2.3 A FATO may be any shape but shall be of sufficient size to contain an area within which can be accommodated a circle of diameter of not less than 1 D of the largest helicopter the helideck is intended to serve.	AC139-8, 3.3.2.	No Difference			
Chapter 3 Reference 3.2.4 Standard	 3.2.4 A TLOF may be any shape but shall be of sufficient size to contain: a) for helicopters with an MTOM of more than 3 175 kg, an area within which can be accommodated a circle of diameter not less than 1 D of the largest helicopter the helideck is intended to serve; and b) for helicopters with an MTOM of 3 175 kg or less, an area within which can be accommodated a circle of diameter not less than 0.83 D of the largest helicopter the helideck is intended to serve. 	AC139-8, 3.3.2.	Less protective or partially implemented or not implemented	Weight breaks are not specified. 1.0 D applies equally.		
Chapter 3 Reference 3.2.5 Recommendation	3.2.5 Recommendation. — For helicopters with a MTOM of 3 175 kg or less, the TLOF should be of sufficient size to contain an area within which can be accommodated a circle of diameter of not less than 1 D of the largest helicopter the helideck is intended to serve.	AC139-8, 3.3.2.	No Difference		Note: weight break not specified.

Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 3 Reference 3.2.6 Standard	3.2.6 A helideck shall be arranged to ensure that a sufficient and unobstructed air-gap is provided which encompasses the full dimensions of the FATO. Note.— Specific guidance on the characteristics of an air-gap is given in the Heliport Manual (Doc 9261). As a general rule, except for shallow superstructures of three stories or less, a sufficient air-gap will be at least 3 m.	AC139-8, Ch 3.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 3 Reference 3.2.7 Recommendation	3.2.7 Recommendation. — The FATO should be located so as to avoid, as far as is practicable, the influence of environmental effects, including turbulence, over the FATO, which could have an adverse impact on helicopter operations.	AC139-8, Ch 3.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 3 Reference 3.2.8 Standard	3.2.8 The TLOF shall be dynamic load-bearing.	AC139-8, Ch 3.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 3 Reference 3.2.9 Standard	3.2.9 The TLOF shall provide ground effect.	AC139-8, Ch 3.	Less protective or partially implemented or not implemented	Not specified.		

FIFTH EDITION 2020

Report on entire Annex Annex 14, Volume 2, Amendment 9						
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 3 Reference 3.2.10 Standard	3.2.10 No fixed object shall be permitted around the edge of the TLOF except for frangible objects, which, because of their function, must be located thereon.	AC139-8, 3.3.4.	No Difference			
Chapter 3 Reference 3.2.11 Standard	3.2.11 For any TLOF 1 D or greater and any TLOF designed for use by helicopters having a D-value of greater than 16.0 m, objects installed in the obstacle-free sector whose function requires them to be located on the edge of the TLOF shall not exceed a height of 25 cm.	AC139-8, 3.3.5.	Less protective or partially implemented or not implemented	No provision for diameter less than 1 D.		
Chapter 3 Reference 3.2.12 Recommendation	3.2.12 Recommendation. — For any TLOF 1 D or greater and any TLOF designed for use by helicopters having a D-value of greater than 16.0 m, objects installed in the obstacle-free sector whose function requires them to be located on the edge of the TLOF should be as low as possible and in any case not exceed a height of 15 cm.	AC139-8.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 3 Reference 3.2.13 Standard	3.2.13 For any TLOF designed for use by helicopters having a D-value of 16.0 m or less, and any TLOF having dimensions of less than 1 D, objects installed in the obstacle-free sector whose function requires them to be located on the edge of the TLOF, shall not exceed a height of 5 cm. Note.— Lighting that is mounted at a height of less than 25 cm is typically assessed for adequacy of visual cues before and after installation.	AC139-8, Ch 3.	Less protective or partially implemented or not implemented	Not specified.		

	Report on entire Annex				A A WIR
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.2.14 Standard	3.2.14 Objects whose function requires them to be located within the TLOF (such as lighting or nets) shall not exceed a height of 2.5 cm. Such objects shall only be present if they do not represent a hazard to helicopters. Note.— Examples of potential hazards include nets or raised fittings on the deck that might induce dynamic rollover for helicopters equipped with skids.	AC139-8, 3.3.5.	Less protective or partially implemented or not implemented	The 2.5 cm height is not specified.	
Chapter 3 Reference 3.2.15 Standard	3.2.15 Safety devices such as safety nets or safety shelves shall be located around the edge of a helideck but shall not exceed the height of the TLOF.	AC139-8, 3.2.9.	No Difference		
Chapter 3 Reference 3.2.16 Standard	3.2.16 The surface of the TLOF shall be skid-resistant to both helicopters and persons and be sloped to prevent pooling of water. <i>Note.— Guidance on rendering the surface of the TLOF</i> <i>skid-resistant is contained in the</i> Heliport Manual (Doc 9261).	AC139-8, 3.2.10.	No Difference		
Chapter 3 Reference 3.3.1 Standard	3.3 Shipboard heliports 3.3.1 The specifications in paragraphs 3.3.16 and 3.3.17 shall be applicable to shipboard heliports completed on or after 1 January 2012 and 1 January 2015, respectively.	AC139-8, Ch 3.	Less protective or partially implemented or not implemented	Not specified.	

FIFTH EDITION 2020

Report on entire Annex Annex 14, Volume 2, Amendment 9						
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 3 Reference 3.3.2 Standard	3.3.2 When helicopter operating areas are provided in the bow or stern of a ship or are purpose-built above the ship's structure, they shall be regarded as purpose-built shipboard heliports.	AC139-8, 3.4.1.	No Difference			
Chapter 3 Reference 3.3.3 Standard	 FATOs and TLOFs Note.— Except for the arrangement described in 3.4.8 b), for shipboard heliports it is presumed that the FATO and the TLOF will be coincidental. Guidance on the effects of airflow direction and turbulence, prevailing wind velocity and high temperature from gas turbine exhausts or flare-radiated heat on the location of the FATO is given in the Heliport Manual (Doc 9261). 3.3.3 A shipboard heliport shall be provided with one FATO and one coincidental or collocated TLOF. 	AC139-8, 3.4.2.	No Difference			
Chapter 3 Reference 3.3.4 Standard	3.3.4 A FATO may be any shape but shall be of sufficient size to contain an area within which can be accommodated a circle of diameter of not less than 1 D of the largest helicopter the heliport is intended to serve.	AC139-8, 3.4.3.	More Exacting or Exceeds	Circular, rather than any shape.		
Chapter 3 Reference 3.3.5 Standard	3.3.5 The TLOF of a shipboard heliport shall be dynamic load-bearing.	AC139-8, Ch 3.	Less protective or partially implemented or not implemented	Not specified.

Chapter 4 Reference 4.1.1	CHAPTER 4. OBSTACLE ENVIRONMENT	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not described in these terms.			
Standard	Note.— The objectives of the specifications in this chapter are to describe the airspace around heliports so as to permit intended helicopter operations to be conducted safely and to prevent, where appropriate State controls exist, heliports from becoming unusable by the growth of obstacles around them. This is achieved by establishing a series of obstacle limitation surfaces that define the limits to which objects may project into the airspace.		Implemented				
	4.1 Obstacle limitation surfaces and sectors						
	Approach surface						
	4.1.1 <i>Description.</i> An inclined plane or a combination of planes or, when a turn is involved, a complex surface sloping upwards from the end of the safety area and centred on a line passing through the centre of the FATO.						
	Note.— See Table 4-1 for dimensions and slopes of surfaces. See Figures 4-1, 4-2, 4-3 and 4-4 for depiction of surfaces.

Chapter 4 Reference 4.1.2	4.1.2 <i>Characteristics.</i> The limits of an approach surface shall comprise:	AC139-8, 4.1.2.	No Difference			
Standard	 a) an inner edge horizontal and equal in length to the minimum specified width/diameter of the FATO plus the safety area, perpendicular to the centre line of the approach surface and located at the outer edge of the safety area; b) two side edges originating at the ends of the inner 					
	edge diverging uniformly at a specified rate from the vertical plane containing the centre line of the FATO; and:					
	c) an outer edge horizontal and perpendicular to the centre line of the approach surface and at a specified height of 152 m (500 ft) above the elevation of the FATO.					
Chapter 4 Reference 4.1.3 Standard	4.1.3 The elevation of the inner edge shall be the elevation of the FATO at the point on the inner edge that is intersected by the centre line of the approach surface. For heliports intended to be used by helicopters operated in performance class 1 and when approved by an appropriate authority, the origin of the inclined plane may be raised	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 4 Reference 4.1.4	directly above the FATO. 4.1.4 The slope(s) of the approach surface shall be measured in the vertical plane containing the centre line of the surface.	AC139-8, Ch 4.	Less protective or partially implemented or	Not specified.		
Standard			not implemented			

FIFTH EDITION 2020

Report on entire Annex 14, volume 2, Amendment					
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.1.5 Standard	4.1.5 In the case of an approach surface involving a turn, the surface shall be a complex surface containing the horizontal normals to its centre line and the slope of the centre line shall be the same as that for a straight approach surface. <i>Note.</i> — <i>See Figure 4-5.</i>	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.	
Chapter 4 Reference 4.1.6 Standard	4.1.6 In the case of an approach surface involving a turn, the surface shall not contain more than one curved portion.	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.	
Chapter 4 Reference 4.1.7 Standard	4.1.7 Where a curved portion of an approach surface is provided, the sum of the radius of arc defining the centre line of the approach surface and the length of the straight portion originating at the inner edge shall not be less than 575 m.	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.	
Chapter 4 Reference 4.1.8 Standard	4.1.8 Any variation in the direction of the centre line of an approach surface shall be designed so as not to necessitate a turn radius less than 270 m. Note.— For heliports intended to be used by helicopters operated in performance class 2 or 3, it is good practice for the approach paths to be selected so as to permit safe forced landings or one-engine-inoperative landings such that, as a minimum requirement, injury to persons on the ground or water or damage to property are minimized. The most critical helicopter type for which the heliport is intended and the ambient conditions may be factors in determining the suitability of such areas.	AC139-8, 4.1.2(g)(iii).	No Difference		

FIFTH EDITION 2020

Report on entire Annex Annex 14, volume 2					
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.1.9 Standard	 Transitional surface Note.— For a FATO at a heliport without a PinS approach incorporating a visual segment surface (VSS) there is no requirement to provide transitional surfaces. 4.1.9 Description. A complex surface along the side of the safety area and part of the side of the approach/take-off climb surface, that slopes upwards and outwards to a predetermined height of 45 m (150 ft). Note.— See Figure 4-3. See Table 4-1 for dimensions and slopes of surfaces. 	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.	
Chapter 4 Reference 4.1.10 Standard	 4.1.10 <i>Characteristics.</i> The limits of a transitional surface shall comprise: a) a lower edge beginning at a point on the side of the approach/take-off climb surface at a specified height above the lower edge extending down the side of the approach/take-off climb surface to the inner edge of the approach/take-off climb surface and from there along the length of the side of the safety area parallel to the centre line of the FATO; and b) an upper edge located at a specified height above the lower edge as set out in Table 4-1. 	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.	

	Annex 14, Volume 2, Amendment 9					
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 4 Reference 4.1.11 Standard	 4.1.11 The elevation of a point on the lower edge shall be: a) along the side of the approach/take-off climb surface — equal to the elevation of the approach/take-off climb surface at that point; and b) along the safety area — equal to the elevation of the inner edge of the approach/take-off climb surface. Note 1.— If the origin of the inclined plane of the approach/take-off climb surface is raised as approved by an appropriate authority, the elevation of the origin of the origin of the transitional surface will be raised accordingly. Note 2.— As a result of b), the transitional surface along the safety area will be curved if the profile of the FATO is curved, or a plane if the profile is a straight line. 	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 4 Reference 4.1.12 Standard	4.1.12 The slope of the transitional surface shall be measured in a vertical plane at right angles to the centre line of the FATO.	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 4 Reference 4.1.13 Standard	Take-off climb surface4.1.13Description. An inclined plane, a combination of planes or, when a turn is involved, a complex surface sloping upwards from the end of the safety area and centred on a line passing through the centre of the FATO.Note.—See Table 4-1 for dimensions and slopes of surfaces. See Figures 4-1, 4-2, 4-3 and 4-4 for depiction of surfaces.	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specifically defined.		

	Annex 14, Volume 2, Amendment 9 Report on entire Annex					
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 4 Reference 4.1.14 Standard	 4.1.14 Characteristics. The limits of a take-off climb surface shall comprise: a) an inner edge horizontal and equal in length to the minimum specified width/diameter of the FATO plus the safety area, perpendicular to the centre line of the take-off climb surface and located at the outer edge of the safety area; b) two side edges originating at the ends of the inner edge and diverging uniformly at a specified rate from the vertical plane containing the centre line of the FATO; and c) an outer edge horizontal and perpendicular to the centre line of the take-off climb surface and at a specified height of 152 m (500 ft) above the elevation of the FATO. 	AC139-8, 4.1.2.	Less protective or partially implemented or not implemented	The centre line perpendicular requirement in a) is not specified.		
Chapter 4 Reference 4.1.15 Standard	4.1.15 The elevation of the inner edge shall be the elevation of the FATO at the point on the inner edge that is intersected by the centre line of the take-off climb surface. For heliports intended to be used by helicopters operated in performance class 1 and when approved by an appropriate authority, the origin of the inclined plane may be raised directly above the FATO.	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 4 Reference 4.1.16 Standard	4.1.16 Where a clearway is provided, the elevation of the inner edge of the take-off climb surface shall be located at the outer edge of the clearway at the highest point on the ground based on the centre line of the clearway.	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.

Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.1.17 Standard	4.1.17 In the case of a straight take-off climb surface, the slope shall be measured in the vertical plane containing the centre line of the surface.	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.	
Chapter 4 Reference 4.1.18 Standard	4.1.18 In the case of a take-off climb surface involving a turn, the surface shall be a complex surface containing the horizontal normals to its centre line and the slope of the centre line shall be the same as that for a straight take-off climb surface. <i>Note.— See Figure 4-5.</i>	AC139-8, 4.1.2.	Less protective or partially implemented or not implemented	Only the 30 m requirement is specified (in feet).	
Chapter 4 Reference 4.1.19 Standard	4.1.19 In the case of a take-off climb surface involving a turn, the surface shall not contain more than one curved portion.	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.	
Chapter 4 Reference 4.1.20 Standard	4.1.20 Where a curved portion of a take-off climb surface, is provided, the sum of the radius of arc defining the centre line of the take-off climb surface and the length of the straight portion originating at the inner edge shall not be less than 575 m.	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.

Report on entire Annex 14, Volume 2, Amendment 9						
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 4 Reference 4.1.21 Standard	 4.1.21 Any variation in the direction of the centre line of a take-off climb surface shall be designed so as not to necessitate a turn of radius less than 270 m. Note 1.— Helicopter take-off performance is reduced in a curve and as such a straight portion along the take-off climb surface prior to the start of the curve allows for acceleration. Note 2.— For heliports intended to be used by helicopters operated in performance class 2 or 3, it is good practice for the departure paths to be selected so as to permit safe forced landings or one-engine-inoperative landings such that, as a minimum requirement, injury to persons on the ground or water or damage to property are minimized. The most critical helicopter type for which the heliport is intended and the ambient conditions may be factors in determining the suitability of such areas. 	AC139-8, 4.1.2.	No Difference			
Chapter 4 Reference 4.1.22 Standard	Obstacle-free sector/surface — helidecks4.1.22Description. A complex surface originating at and extending from a reference point on the edge of the FATO of a helideck. In the case of a TLOF of less than 1 D, the reference point shall be located not less than 0.5 D from the centre of the TLOF.	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not defined.		
Chapter 4 Reference 4.1.23 Standard	4.1.23 <i>Characteristics.</i> An obstacle-free sector/surface shall subtend an arc of specified angle.	AC139-8. 4.1.5.	No Difference			

	R				
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.1.24 Standard	 4.1.24 A helideck obstacle-free sector shall comprise of two components, one above and one below helideck level: Note.— See Figure 4-7. a) Above helideck level. The surface shall be a horizontal plane level with the elevation of the helideck surface that subtends an arc of at least 210 degrees with the apex located on the periphery of the D circle extending outwards to a distance that will allow for an unobstructed departure path appropriate to the helicopter the helideck is intended to serve. b) Below helideck level. Within the (minimum) 210-degree arc, the surface shall additionally extend downward from the edge of the FATO below the elevation of the helideck to water level for an arc of not less than 180 degrees that passes through the centre of the FATO and outwards to a distance that will allow for safe clearance from the obstacles below the helideck in the event of an engine failure for the type of helicopter the helideck is intended to serve. 	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.	

FIFTH EDITION 2020

Chapter 4 Reference 4.1.25 Standard	 Limited obstacle sector/surface — helidecks Note.— Where obstacles are necessarily located on the structure, a helideck may have a limited obstacle sector (LOS). 4.1.25 Description. A complex surface originating at the reference point for the obstacle-free sector and extending over the arc not covered by the obstacle-free sector within which the height of obstacles above the level of the TLOF will be prescribed. 	AC139-8, 4.1.6.	Different in character or other means of compliance	The limited obstacle sector should extend outwards from that part of the FATO periphery that is not contained within the approach and take-off climb sector, for a distance of not less than one third the overall helicopter length. Within this sector no obstruction should be permitted above a 1:2 gradient.	
Chapter 4 Reference 4.1.26 Standard	4.1.26 <i>Characteristics.</i> A limited obstacle sector shall not subtend an arc greater than 150 degrees. Its dimensions and location shall be as indicated in Figure 4-8 for a 1 D FATO with coincidental TLOF and Figure 4-9 for a 0.83 D TLOF.	AC139-8, 4.1.5.	No Difference

Chapter 4	4.2 Obstacle limitation requirements		Not Applicable		No precision-approach		
Reference					FATO in New Zealand.		
4.2.1	Note 1.— The requirements for obstacle limitation surfaces are specified on the basis of the intended use of a FATO, i.e. approach manoeuvre to hover or landing, or						
Standard	take-off manoeuvre and type of approach, and are intended to be applied when such use is made of the FATO. In cases where operations are conducted to or from both directions of a FATO, then the function of certain surfaces may be nullified because of more stringent requirements of another lower surface. Note 2.— Guidance on obstacle protection surfaces, for when a visual approach slope indicator (VASI) is installed, is given in the onshore section of the Heliport Manual (Doc 9261).						
	<i>Surface-level heliports</i> 4.2.1 The following obstacle limitation surfaces shall be established for a FATO at heliports with a PinS approach procedure utilizing a visual segment surface:						
	a) take-off climb surface;						
	b) approach surface; andc) transitional surfaces.						
	Note 1.— See Figure 4-3.						
	Note 2.— The Procedures for Air Navigation Services — Aircraft Operations, (PANS-OPS, Doc 8168), Volume II, Part IV details procedure design criteria.

Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 4 Reference 4.2.2 Standard	4.2.2 The following obstacle limitation surfaces shall be established for a FATO at heliports, other than specified in 4.2.1, including heliports with a PinS approach procedure where a visual segment surface is not provided:a) take-off climb surface; andb) approach surface.	AC139-8, 4.1.1.	No Difference			
Chapter 4 Reference 4.2.3 Standard	4.2.3 The slopes of the obstacle limitation surfaces shall not be greater than, and their other dimensions not less than, those specified in Table 4-1 and shall be located as shown in Figures 4-1, 4-2 and 4-6.	AC139-8, 4.1.1.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 4 Reference 4.2.4 Standard	4.2.4 For heliports that have an approach/take-off climb surface with a 4.5 per cent slope design, objects shall be permitted to penetrate the obstacle limitation surface if the results of an aeronautical study approved by an appropriate authority have reviewed the associated risks and mitigation measures. Note 1.— The identified objects may limit the heliport operation. Note 2.— Annex 6, Part 3, provides procedures that may be useful in determining the extent of obstacle penetration.	AC139-8, Ch 4.	Less protective or partially implemented or not implemented	Not specified.		

	Re				
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.2.5 Standard	4.2.5 New objects or extensions of existing objects shall not be permitted above any of the surfaces in 4.2.1 and 4.2.2 except when shielded by an existing immovable object or after an aeronautical study approved by an appropriate authority determines that the object will not adversely affect the safety or significantly affect the regularity of operations of helicopters. <i>Note.</i> — <i>Circumstances in which the shielding principle</i> <i>may reasonably be applied are described in the</i> Airport Services Manual (<i>Doc 9137</i>), <i>Part 6</i> .	AC139-8, 4.1.	Less protective or partially implemented or not implemented	Not specified.	
Chapter 4 Reference 4.2.6 Recommendation	4.2.6 Recommendation. — Existing objects above any of the surfaces in 4.2.1 and 4.2.2 should, as far as practicable, be removed except when the object is shielded by an existing immovable object or after an aeronautical study approved by an appropriate authority determines that the object will not adversely affect the safety or significantly affect the regularity of operations of helicopters. Note.— The application of curved approach or take-off climb surfaces as specified in 4.1.5 or 4.1.18 may alleviate the problems created by objects infringing these surfaces.	AC139-8, 4.1.	Less protective or partially implemented or not implemented	Not specified.	

	Annex 14, Volume 2, Amendment 9 Report on entire Annex					
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 4 Reference 4.2.7 Standard	 4.2.7 A surface-level heliport shall have at least one approach and take-off climb surface. An aeronautical study shall be undertaken by an appropriate authority when only a single approach and take-off climb surface is provided considering as a minimum, the following factors: a) the area/terrain over which the flight is being conducted; b) the obstacle environment surrounding the heliport and the availability of at least one protected side slope; c) the performance and operating limitations of helicopters intending to use the heliport; and d) the local meteorological conditions including the prevailing winds. 	AC139-8, 4.1.1.	Different in character or other means of compliance	Reference specifies sufficient approach and take-off climb surfaces to ensure that a helicopter can conduct a landing or take-off in the existing wind conditions.		

FIFTH EDITION 2020

	Report on entire Annex 14, volume 2, Amendment 9					
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 4 Reference 4.2.8 Recommendation	 4.2.8 Recommendation.— A surface-level heliport should have at least two approach and take-off climb surfaces to avoid downwind conditions, minimize crosswind conditions and permit for a balked landing. Note.— See the Heliport Manual (Doc 9261) for guidance. Table 4-1. Dimensions and slopes of obstacle limitation surfaces for all visual FATOs Note.— The slope design categories in Table 4-1 may not be restricted to a specific performance class of operation and may be applicable to more than one performance class of operation. The slope design categories depicted in Table 4-1 represent minimum design slope angles and not operational slopes. Slope category "A" generally corresponds with helicopters operated in performance class 1; slope category "B" generally corresponds with helicopters operated in performance class 3; and slope category "C" generally corresponds with helicopters operated in performance class 2. Consultation with helicopter operators will help to determine the appropriate slope category to apply according to the heliport environment and the most critical helicopter type for which the heliport is intended. 	AC139-8, 4.1.1.	Different in character or other means of compliance	Reference specifies sufficient approach and take-off climb surfaces to ensure that a helicopter can conduct a landing or take-off in the existing wind conditions.		
Chapter 4 Reference 4.2.9 Standard	<i>Elevated heliports</i> 4.2.9 The obstacle limitation surfaces for elevated heliports shall conform to the requirements for surface-level heliports specified in 4.2.1 to 4.2.6.	AC139-8, 4.1.2.	Less protective or partially implemented or not implemented	No differentiation is applied for elevated heliports.

Chapter 5 Reference 5.1.1.1	CHAPTER 5. VISUAL AIDS	AC139-8, 5.1.1.	No Difference			
Standard	Note 1.— The procedures used by some helicopters require that they utilize a FATO having characteristics similar in shape to a runway for fixed wing aircraft. For the purpose of this chapter, a FATO having characteristics similar in shape to a runway is considered as satisfying the concept for a "runway-type FATO". For such arrangements it is sometimes necessary to provide specific markings to enable a pilot to distinguish a runway-type FATO during an approach. Appropriate markings are contained within sub-sections entitled "Runway-type FATOs". The requirements applicable to all other types of FATOs are given within sub-sections entitled "All FATOs except runway-type FATOs". Note 2.— It has been found that, on surfaces of light colour, the conspicuity of white and yellow markings can be improved by outlining them in black. Note 3.— Guidance is given in the Heliport Manual (Doc 9261) on marking the maximum allowable mass (5.2.3) and the D-value (5.2.4) on the heliport surface to avoid confusion between markings where metric units are used and markings where imperial units are used. Note 4.— For a non-purpose-built heliport located on a ship's side the surface colour of the main deck can vary from ship to ship and therefore some discretion may need to be exercised in the colour selection of heliport paint schemes, the objective being to ensure that the markings are conspicuous against the surface of the ship and the operating background.

Chapter 5 Reference 5.2.1.4 Standard	5.2.1.4 A winching area clear zone marking shall consist of a solid circle of diameter not less than 5 m and of a conspicuous colour.	AC139-8, Ch 5.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 5 Reference 5.2.1.5 Standard	5.2.1.5 A winching area manoeuvring zone marking shall consist of a broken circle line of 30 cm in width and of a diameter not less than 2 D and be marked in a conspicuous colour. Within it "WINCH ONLY" shall be marked to be easily visible to the pilot.	AC139-8, Ch 5.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 5 Reference 5.2.2.1 Standard	5.2.2 Heliport identification marking <i>Application</i> 5.2.2.1 A heliport identification marking shall be provided at a heliport.	AC139-8, 5.2.1.	No Difference			

FIFTH EDITION 2020

Annex 14, volume 2, Amendment 9						
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 5 Reference 5.2.2.2 Standard	Location — All FATOs except runway-type FATOs 5.2.2.2 A heliport identification marking shall be located at or near the centre of the FATO. Note 1.— The objective of heliport identification marking is to provide to the pilot an indication of the presence of a heliport and, by its form, the likely usage; the preferred direction(s) of approach; or the FATO orientation within the helideck obstacle environment. Note 2.— For other than helidecks, the preferred direction(s) of approach corresponds to the median of the departure/arrival surface(s). Note 3.— For helidecks, the bar of the "H" points to the centre of the limited obstacle sector (LOS). Note 4.— If the touchdown/positioning marking (TDPM) is offset, the heliport identification marking is established in the centre of the TDPM. Note 5.— On a FATO which does not contain a TLOF and which is marked with an aiming point marking (see 5.2.7), the heliport identification marking is established in the centre of the aiming point marking as shown in Figures 5 -1 and 5-2.	AC139-8, 5.2.2.	Different in character or other means of compliance	A heliport identification marking should be located within the aiming point marking, or within the TALO if no aiming point marking is provided.		
Chapter 5 Reference 5.2.2.3 Standard	5.2.2.3 On a FATO which contains a TLOF, a heliport identification marking shall be located in the FATO so the position of it coincides with the centre of the TLOF.	AC139-8, Ch 5.	Less protective or partially implemented or not implemented	Not specified.		

FIFTH EDITION 2020

Report on entire Annex Annex 14, volume 2, Amendment 9						
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 5 Reference 5.2.2.4 Standard	<i>Location — Runway-type FATOs</i> 5.2.2.4 A heliport identification marking shall be located in the FATO and when used in conjunction with FATO designation markings, shall be displayed at each end of the FATO as shown in Figure 5-3.	AC139-8, Ch 5.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 5 Reference 5.2.2.5 Standard	Characteristics 5.2.2.5 A heliport identification marking, except for a heliport at a hospital, shall consist of a letter H, in white. The dimensions of the H marking shall be no less than those shown in Figure 5-4 and where the marking is used for a runway-type FATO, its dimensions shall be increased by a factor of 3 as shown in Figure 5-3.	AC139-8, 5.2.3.	No Difference			
Chapter 5 Reference 5.2.2.6 Standard	5.2.2.6 A heliport identification marking for a heliport at a hospital shall consist of a letter H, red in colour, on a white cross made of squares adjacent to each of the sides of a square containing the H as shown in Figures 5-2 and 5-4.	AC139-8, 5.2.4 & Figure 5-1(a).	No Difference			
Chapter 5 Reference 5.2.2.7 Standard	5.2.2.7 A heliport identification marking shall be oriented with the cross arm of the H at right angles to the preferred final approach direction. For a helideck, the cross arm shall be on or parallel to the bisector of the obstacle-free sector. For a non-purpose-built shipboard heliport located on a ship's side, the cross arm shall be parallel with the side of the ship.	AC139-8, 5.2.5.	Less protective or partially implemented or not implemented	The helideck provision is not specified.

Chapter 5 Reference 5.2.2.8 Recommendation	 5.2.2.8 Recommendation.— On a helideck or a shipboard heliport where the D-value is 16.0 m or larger, the size of the heliport identification H marking should have a height of 4 m with an overall width not exceeding 3 m and a stroke width not exceeding 0.75 m. Where the D-value is less than 16.0 m, the size of the heliport identification H marking should have a height of 3 m with an overall width not exceeding 2.25 m and a stroke width not exceeding 0.5 m. Figure 5-1. Combined heliport identification, aiming point and FATO perimeter marking 	AC139-8, 5.2.5 note.	No Difference		
Chapter 5 Reference 5.2.3.1 Standard	 5.2.3 Maximum allowable mass marking Note 1.— The objective of the maximum allowable mass marking is to provide the mass limitation of the heliport such that it is visible to the pilot from the preferred final approach direction. Note 2.— Where States express the maximum allowable mass in pounds, it is not appropriate to suffix with the letter "t" which is used only to indicate metric tonnes. Guidance on markings where States use imperial units is given in the Heliport Manual (Doc 9261). 5.2.3.1 A maximum allowable mass marking shall be displayed at an elevated heliport, a helideck and a shipboard heliport. 	AC139-8, 5.2.6.	No Difference		

FIFTH EDITION 2020

Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 5 Reference 5.2.3.2 Recommendation	5.2.3.2 Recommendation. — A maximum allowable mass marking should be displayed at a surface-level heliport.	AC139-8, 5.2.6.	Less protective or partially implemented or not implemented	Specified only for elevated heliports and helidecks.	
Chapter 5 Reference 5.2.3.3 Recommendation	Location 5.2.3.3 Recommendation.— A maximum allowable mass marking should be located within the TLOF or FATO and so arranged as to be readable from the preferred final approach direction.	AC139-8, 5.2.7.	No Difference		
Chapter 5 Reference 5.2.3.4 Standard	Characteristics 5.2.3.4 A maximum allowable mass marking shall consist of a one-, two- or three-digit number.	AC139-8, 5.2.8.	No Difference		
Chapter 5 Reference 5.2.3.5 Standard	5.2.3.5 The maximum allowable mass shall be expressed in tonnes (1 000 kg) rounded down to the nearest 1 000 kg followed by the letter "t". Where States use mass in pounds, the maximum allowable mass marking shall indicate the allowable helicopter mass in thousands of pounds rounded down to the nearest 1 000 lbs.	AC139-8, 5.2.8.	No Difference		
Chapter 5 Reference 5.2.3.6 Recommendation	5.2.3.6 Recommendation. — The maximum allowable mass should be expressed to the nearest 100 kg. The marking should be presented to one decimal place and rounded to the nearest 100 kg followed by the letter "t". Where States use mass in pounds, the maximum allowable mass marking should indicate the allowable helicopter mass in hundreds of pounds rounded to the nearest 100 lb.	AC139-8, 5.2.8.	Less protective or partially implemented or not implemented	Not specified to this level of detail.	

FIFTH EDITION 2020

	Re		The War		
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 5 Reference 5.2.3.7 Recommendation	5.2.3.7 Recommendation. — When the maximum allowable mass is expressed to 100 kg, the decimal place should be preceded with a decimal point marked with a 30 cm square.	AC139-8, Ch 5.	Less protective or partially implemented or not implemented	Not specified.	
Chapter 5 Reference 5.2.3.8 Recommendation	All FATOs except runway-type FATOs 5.2.3.8 Recommendation.— The numbers and the letter of the marking should have a colour contrasting with the background and should be in the form and proportion shown in Figure 5-5 for a D-value of more than 30 m. For a D-value between 15 m and 30 m, the height of the numbers and the letter of the marking should be a minimum of 90 cm, and for a D-value of less than 15 m, the height of the numbers and the letter of the marking should be a minimum of 60 cm, each with a proportional reduction in width and thickness.	AC139-8, 5.2.9.	No Difference		Note: the limited-space case is not provided for.
Chapter 5 Reference 5.2.3.9 Recommendation	Runway-type FATOs 5.2.3.9 Recommendation. — The numbers and the letter of the marking should have a colour contrasting with the background and should be in the form and proportion shown in Figure 5-5.	AC139-8, Ch 5.	Less protective or partially implemented or not implemented	Not specified.

Chapter 5 Reference 5.2.9.9 Standard	5.2.9.9 The prohibited landing sector marking, when provided, shall be indicated by white and red hatched markings as shown in Figure 5-8.	CAR	No Difference	NIL	NIL	
Chapter 5 Reference 5.2.9.10 Standard	5.2.9.10 The TDPM shall take precedence when used in conjunction with other markings on the TLOF except for the prohibited landing sector marking. Note.— The prohibited landing sector marking, when provided, is not intended to move the helicopter away from objects around the FATO, but to ensure that the tail is not placed in an orientation that might constitute a hazard. This is achieved by having the helicopter nose clear of the hatched markings during the touchdown.	CAR	No Difference	NIL	NIL	
Chapter 5 Reference 5.2.10.1 Recommendation	5.2.10 Heliport name marking Note.— The objective of heliport name marking is to provide to the pilot a means of identifying a heliport which can be seen, and read, from all directions of approach. Application 5.2.10.1 Recommendation. — A heliport name marking should be provided at a heliport and helideck where there is insufficient alternative means of visual identification.	AC139-8, 5.2.22.	No Difference

	R	eport on entire Annex			Annex 14, volume 2, Amendment 9		
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference		
Chapter 5 Reference 5.2.10.6 Recommendation	All FATOs except runway-type FATOs. 5.2.10.6 Recommendation.— The characters of the marking should be not less than 1.5 m in height at surface-level heliports and not less than 1.2 m on elevated heliports, helidecks and shipboard heliports. The colour of the marking should contrast with the background and preferably be white.	AC139-8, Ch 5.	Less protective or partially implemented or not implemented	Not specified.			
Chapter 5 Reference 5.2.11.1 Standard	 5.2.11 Helideck obstacle-free sector (chevron) marking Note.— The objective of helideck obstacle-free sector (chevron) marking is to indicate the direction and limits of a sector that is free of obstacles above the level of the helideck for the preferred approach and departure directions. Application 5.2.11.1 A helideck with adjacent obstacles that penetrate above the level of the helideck shall have an obstacle-free sector marking. 	AC139-8, 5.2.	Less protective or partially implemented or not implemented	Not specified.			

FIFTH EDITION 2020

Report on entire Annex 4, volume 2, Amendment 9						
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 5 Reference 5.2.11.2 Standard	Location 5.2.11.2 A helideck obstacle-free sector marking shall be located, where practicable, at a distance from the centre of the TLOF equal to the radius of the largest circle that can be drawn in the TLOF or 0.5 D, whichever is greater. Note.— Where the point of origin is outside the TLOF, and it is not practicable to physically paint the chevron, the chevron is relocated to the TLOF perimeter on the bisector of the obstacle-free sector. In this case, the distance and direction of displacement, along with the attention-getting "WARNING DISPLACED CHEVRON", is marked in a box beneath the chevron in black characters not less than 10 cm high. (An example figure is given in the Heliport Manual (Doc 9261).)	AC139-8, 5.2.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 5 Reference 5.2.11.3 Standard	Characteristics 5.2.11.3 The helideck obstacle-free sector marking shall indicate the location of the obstacle-free sector and the directions of the limits of the sector. <i>Note.</i> — <i>Example figures are given in the</i> Heliport Manual (<i>Doc 9261</i>).	AC139-8, 5.2.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 5 Reference 5.2.11.4 Standard	5.2.11.4 The height of the chevron shall not be less than 30 cm.	AC139-8, 5.2.	Less protective or partially implemented or not implemented	Not specified.

Chapter 5 Reference 5.3.3.3 Recommendation	Characteristics 5.3.3.3 Recommendation.— An approach lighting system should consist of a row of three lights spaced uniformly at 30 m intervals and of a crossbar 18 m in length at a distance of 90 m from the perimeter of the FATO as shown in Figure 5-13. The lights forming the crossbar should be as nearly as practicable in a horizontal straight line at right angles to, and bisected by, the line of the centre line lights and spaced at 4.5 m intervals. Where there is the need to make the final approach course more conspicuous, additional lights spaced uniformly at 30 m intervals should be added beyond the crossbar. The lights beyond the crossbar may be steady or sequenced flashing, depending upon the environment. Note.— Sequenced flashing lights may be useful where identification of the approach lighting system is difficult due to surrounding lights.	AC139-8, 5.3.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 5 Reference 5.3.3.4 Standard	5.3.3.4 The steady lights shall be omnidirectional white lights.	AC139-8, 5.3.	Less protective or partially implemented or not implemented	Not specified.		
Chapter 5 Reference 5.3.3.5 Standard	5.3.3.5 Sequenced flashing lights shall be omnidirectional white lights.	AC139-8, 5.3.	Less protective or partially implemented or not implemented	Not specified.

Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 5 Reference 5.3.4.2 Standard	<i>Location</i> 5.3.4.2 The flight path alignment guidance lighting system shall be in a straight line along the direction(s) of approach and/or departure path on one or more of the TLOF, FATO, safety area or any suitable surface in the immediate vicinity of the FATO, TLOF or safety area.	AC139-8, Ch 5.	Less protective or partially implemented or not implemented	Not specified.	
Chapter 5 Reference 5.3.4.3 Recommendation	5.3.4.3 Recommendation. — If combined with a flight path alignment guidance marking, as far as is practicable the lights should be located inside the "arrow" markings.	AC139-8, Ch 5.	Less protective or partially implemented or not implemented	Not specified.	
Chapter 5 Reference 5.3.4.4 Recommendation	Characteristics 5.3.4.4 Recommendation.— A flight path alignment guidance lighting system should consist of a row of three or more lights spaced uniformly with a total minimum distance of 6 m. Intervals between lights should not be less than 1.5 m and should not exceed 3 m. Where space permits, there should be 5 lights. (See Figure 5-10.) Note.— The number of lights and spacing between these lights may be adjusted to reflect the space available. If more than one flight path alignment system is used to indicate available approach and/or departure path direction(s), the characteristics for each system are typically kept the same. (See Figure 5-10.)	AC139-8, Ch 5.	Less protective or partially implemented or not implemented	Not specified.

Chapter 5 Reference 5.3.8.4	5.3.8.4 Recommendation. — The light distribution of aiming point lights should be as shown in Figure 5-12, Illustration 4.	AC139-8, Figure 5-7.	No Difference		
Recommendation					
Chapter 5 Reference 5.3.9.1 Standard	5.3.9 TLOF lighting system Note.— The objective of a TLOF lighting system is to provide illumination of the TLOF and required elements within. For a TLOF located in a FATO, the objective is to provide discernibility to the pilot, on a final approach, of the TLOF and required elements within; while for a TLOF located on an elevated heliport, shipboard heliport or helideck, the objective is visual acquisition from a defined range and to provide sufficient shape cues to permit an appropriate approach angle to be established. Application 5.3.9.1 A TLOF lighting system shall be provided at a heliport intended for use at night. Note.— Where a TLOF is located in a stand, the objective may be met with the use of ambient lighting or stand floodlighting.	AC139-8, 5.3.9.	No Difference

Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference	
Chapter 5 Reference 5.3.9.2 Standard	 5.3.9.2 For a surface-level heliport, lighting for the TLOF in a FATO shall consist of one or more of the following: a) perimeter lights; b) floodlighting; c) arrays of segmented point source lighting (ASPSL) or luminescent panel (LP) lighting to identify the TLOF is a surface of the following is a	AC139-8, 5.3.10.	Less protective or partially implemented or not implemented	Item c) is not specified.		
Chapter 5 Reference 5.3.9.3	TLOF when a) and b) are not practicable and FATO lights are available. 5.3.9.3 For an elevated heliport, shipboard heliport or helideck, lighting for the TLOF in a FATO shall consist of: a) perimeter lights; and	AC139-8, 5.3.12.	Different in character or other means of compliance	Perimeter lights and floodlighting are specified; no provision for ASPL or LPs.		
Standard	 b) ASPSL and/or LPs to identify the TDPM and/or floodlighting to illuminate the TLOF. Note.— At elevated heliports, shipboard heliports and helidecks, surface texture cues within the TLOF are essential for helicopter positioning during the final approach and landing. Such cues can be provided using various forms of lighting (ASPSL, LP, floodlights or a combination of these lights, etc.) in addition to perimeter lights. Best results have been demonstrated by the combination of perimeter lights and ASPSL in the form of encapsulated strips of light emitting diodes n (LEDs) and inset lights to identify the TDPM and heliport identification markings. 					
Chapter 5 Reference 5.3.9.4 Recommendation	5.3.9.4 Recommendation. — <i>TLOF ASPSL and/or LPs to identify the TDPM and/or floodlighting should be provided at a surface-level heliport intended for use at night when enhanced surface texture cues are required.</i>	AC139-8, 5.3.	Less protective or partially implemented or not implemented	Not specified.

		eport on entire Annex			2, Amendment 9
Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 5 Reference 5.3.9.5 Standard	 Location 5.3.9.5 TLOF perimeter lights shall be placed along the edge of the area designated for use as the TLOF or within a distance of 1.5 m from the edge. Where the TLOF is a circle, the lights shall be: a) located on straight lines in a pattern which will provide information to pilots on drift displacement; and b) where a) is not practicable, evenly spaced around the perimeter of the TLOF at the appropriate interval, except that over a sector of 45 degrees the lights shall be spaced at half spacing. 	AC139-8, 5.3.13.	Different in character or other means of compliance	TALO perimeter lights should either be placed: a) along the edge of the TALO or within 1500 mm from the edge; or b) along the edge of the usable area of an elevated heliport. (This may be at a dimension less than the FATO but should be at least at a distance of 1500 mm surrounding the TALO); and c) where the TALO is a circle, the lights should be located on straight lines in a pattern that will provide information to pilots on drift displacement.	
Chapter 5 Reference 5.3.9.6 Standard	5.3.9.6 TLOF perimeter lights shall be uniformly spaced at intervals of not more than 3 m for elevated heliports and helidecks and not more than 5 m for surface-level heliports. There shall be a minimum number of four lights on each side including a light at each corner. For a circular TLOF where lights are installed in accordance with 5.3.9.5 b), there shall be a minimum of fourteen lights. <i>Note.</i> — <i>Guidance on this issue is contained in the</i> Heliport Manual (<i>Doc 9261</i>).	AC139-8, 5.3.14.	Less protective or partially implemented or not implemented	TALO perimeter lights should be uniformly spaced at intervals of not more than 3000 mm for elevated heliports and helidecks and not more than 5000 mm for surface level heliports. There should be a minimum number of eight lights with three lights on each side (including the lights at each corner).

Chapter 6 Reference 6.1.1	CHAPTER 6. HELIPORT EMERGENCY RESPONSE	CAR 139.57, Aerodrome emergency plan; AC139-4, Aerodrome Rescue and Firefighting.	Less protective or partially implemented or not implemented	The rule would apply only to heliports located on a licensed aerodrome (for which an emergency plan is required).	
Standard	6.1 Heliport emergency planning Introductory Note.— Heliport emergency planning is the process of preparing a heliport to cope with an emergency that takes place at the heliport or in its vicinity. Examples of emergencies include crashes on or off the heliport, medical emergencies, dangerous goods occurrences, fires and natural disasters. The purpose of heliport emergency planning is to minimize the impact of an emergency by saving lives and maintaining helicopter operations. The heliport emergency plan sets out the procedures for coordinating the response of heliport agencies or services (air traffic services unit, firefighting services, heliport administration, medical and ambulance services, aircraft operators, security services and police) and the response of agencies in the surrounding community (fire departments, police, medical and ambulance services, hospitals, military, and harbour patrol or coast guard) that could be of assistance in responding to the emergency. 6.1.1 A heliport emergency plan shall be established commensurate with the helicopter operations and other activities conducted at the heliport.				
Chapter 6 Reference 6.1.2 Standard	6.1.2 The plan shall identify agencies which could be of assistance in responding to an emergency at the heliport or in its vicinity.	CAR 139.57; AC139-4.	Less protective or partially implemented or not implemented	The rule would apply only to heliports located on a licensed aerodrome (for which an emergency plan is required).

Chapter 6	6.2 Rescue and firefighting	CAR	No Difference	NIL	NIL
Reference					
6.2.1.1	Introductory Note.— It is important this section be read in conjunction with the appropriate detailed guidance on rescue and firefighting options given in the Heliport Manual				
Standard	(Doc 9261).				
	Provisions described in this section are intended to address incidents or accidents within the heliport response area only. No dedicated firefighting provisions are included for helicopter accidents or incidents that may occur outside the response area, such as on an adjacent roof near an elevated heliport.				
	Complementary agents are ideally dispensed from one or two extinguishers (although more extinguishers may be permitted where high volumes of an agent are specified, e.g. H3 operations). The discharge rate of complementary agents needs to be selected for optimum effectiveness of the agent used. When selecting dry chemical powders for use with foam, care needs to be exercised to ensure compatibility. Complementary agents need to comply with the appropriate specifications of the International Organization for Standardization (ISO).				
	Where a fixed monitor system (FMS) is installed, trained monitor operators, where provided, are positioned on at least the upwind location to ensure primary media is directed to the seat of the fire. For a ring-main system (RMS) practical testing has indicated that these solutions are only guaranteed to be fully effective for TLOFs up to 20 m diameter. If the TLOF is greater than 20 m, an RMS should not be considered unless supplemented by other means to distribute primary media (e.g. additional pop-up nozzles installed in the centre of the TLOF).

Annex Reference	AERODROMES Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference		
	Sea (SOLAS) sets forth provisions on rescue and firefighting (RFF) arrangements for purpose-built and non-purpose-built shipboard heliports in SOLAS regulations II 2/18, II-2-Helicopter Facilities, and the SOLAS Fire Safety Systems Code.						
	It may therefore be assumed that this chapter does not include RFF arrangements for purpose built or non-purpose-built shipboard heliports or for winching areas.						
	6.2.1 Applicability						
	6.2.1.1 The following specifications shall apply to new builds or replacement of existing systems or part thereof from 1 January 2023: 6.2.2.1, 6.2.3.3, 6.2.3.4, 6.2.3.6, 6.2.3.7, 6.2.3.9, 6.2.3.10, 6.2.3.12, 6.2.3.13 and 6.2.4.2.						
	Note.— For areas for the exclusive use of helicopters at aerodromes primarily for the use of aeroplanes, distribution of extinguishing agents, response time, rescue equipment and personnel have not been considered in this section. See Annex 14, Volume I, Chapter 9.						
Chapter 6 Reference 6.2.1.2	6.2.1.2 Rescue and firefighting equipment and services shall be provided at helidecks and at elevated heliports located above occupied structures.	CAR	No Difference	NIL	NIL

Reference 6.2.2.2	primary media is applied as a solid stream					
	Note.— This section is not applicable to helidecks regardless of how primary media is being delivered.					
Recommendation	6.2.2.2 Recommendation.— The practical critical area should be calculated by multiplying the helicopter fuselage length (m) by the helicopter fuselage width (m) plus an additional width factor (W1) of 4 m. Categorization from H0 to H3 should be determined on the basis of the fuselage dimensions in Table 6-1. Note 1.— For helicopters which exceed one or both of the dimensions for a category H3 heliport, it will be necessary to recalculate the level of protection using practical critical area assumptions based on the actual fuselage length and the actual fuselage width of the helicopter plus an additional width factor (W1) of 6 m. Note 2.— The practical critical area may be considered on a helicopter type-specific basis by using the formula in 6.2.2.2. Guidance on practical critical area in relation to the heliport firefighting category is given in the Heliport Manual (Doc 9261) where a discretionary 10 per cent tolerance on fuselage dimension "upper limits" is applied. Table 6-1. Heliport firefighting category

Chapter 6	6.2.3 Extinguishing agents	CAR	No Difference	NIL	NIL
Reference 6.2.3.1 Recommendation	6.2.3 Extinguishing agents Note 1.— Throughout section 6.2.3, the discharge rate of a performance level B foam is assumed to be based on an application rate of 5.5 L/min/m2, and for a performance level C foam and for water, is assumed to be based on an application rate of 3.75 L/min/m2. These rates may be reduced if, through practical testing, a State demonstrates that the objectives of 6.2.2.1 can be achieved for a specific foam use at a lower discharge rate (L/min). Note 2.— Information on the required physical properties and fire extinguishing performance criteria needed for a foam to achieve an acceptable performance level B or C rating is given in the Airport Services Manual (Doc 9137), Part 1.	CAR	No Difference	NIL	NIL
	Surface level heliports with primary media applied as a solid stream using a portable foam application system (PFAS) Note.— Except for a limited-sized surface-level heliport,				
	the assumption is made that foam dispensing equipment will be transported to the incident or accident location on an appropriate vehicle (a PFAS).				
	6.2.3.1 Recommendation. — Where a rescue and firefighting service (RFFS) is provided at a surface-level heliport, the amount of primary media and complementary agents should be in accordance with Table 6 2.				
	Note.— The minimum discharge duration in Table 6-2 is assumed to be two minutes. However, if the availability of back-up specialist fire services is remote from the heliport, consideration may need to be given to increasing the discharge duration from two minutes to three minutes.
