Airworthiness Directive Schedule
Aeroplanes
Cessna 185 Series
26 November 2020

Notes:
1. This AD schedule is applicable to Cessna 185, 185A, 185B, 185C, 185D, A185E and A185F series aircraft manufactured under FAA Type Certificate No. 3A24.
2. The Federal Aviation Administration (FAA) is the National Airworthiness Authority (NAA) responsible for the issue of State of Design Airworthiness Directives (ADs) for these aircraft. State of Design ADs can be obtained directly from the FAA website at http://rgl.faa.gov/Regulatory_and_Guidance_Library/rgAD.nsf/MainFrame?OpenFrameSet.
3. The date above indicates the amendment date of this schedule.
4. New or amended ADs are shown with an asterisk. *

DCA/CESS185/101 Cancelled ........................................................................................................................3
DCA/CESS185/102 Cancelled ........................................................................................................................3
DCA/CESS185/103 Fuel Drain Line Relocation - Modification .................................................................3
DCA/CESS185/104 Cancelled: Purpose fulfilled ........................................................................................3
DCA/CESS185/105 Cancelled – DCA/ROLE/3 refers ................................................................................3
DCA/CESS185/106 Cancelled: purpose fulfilled ........................................................................................3
DCA/CESS185/107 No. 5 Cylinder Baffle - Modification .............................................................................3
DCA/CESS185/108 Cancelled ........................................................................................................................3
DCA/CESS185/109A Cancelled .....................................................................................................................3
DCA/CESS185/110 Mainplane Rear Spar Cracking - Inspection ...............................................................3
DCA/CESS185/111 Propeller Governor - Replacement ..............................................................................4
DCA/CESS185/112A Cancelled: purpose fulfilled ....................................................................................4
DCA/CESS185/113 Seat Belt Attachment - Modification ...........................................................................4
DCA/CESS185/114 Cancelled ........................................................................................................................4
DCA/CESS185/115 Battery Cable Re-Route - Modification ....................................................................4
DCA/CESS185/116 Cancelled ........................................................................................................................4
DCA/CESS185/117 Stall Warning Horn Improvement - Modification .......................................................4
DCA/CESS185/118B Cancelled: Purpose fulfilled by DCA/CESS185/120 .............................................4
DCA/CESS185/119 Cancelled: Included in DCA/CESS185/120 ...............................................................4
DCA/CESS185/120 Throttle Control Bellcrank Assembly - Modification ..................................................4
DCA/CESS185/121 Throttle Control Linkage - Modification ....................................................................5
DCA/CESS185/122 Cancelled: DCA/GEN/5 refers ..................................................................................5
DCA/CESS185/123 Main Gear - Wheel Assembly Through Bolts - Inspection and Modification ........5
DCA/CESS185/124 Main Gear - Wheel Assembly Cap Screws - Inspection and Modification ............5
DCA/CESS185/125 Throttle/Mixture Control Cable Attachment - Inspection .........................................6
DCA/CESS185/126 Induction Air Duct - Replacement ..............................................................................6
DCA/CESS185/127A Fuel Cell Capacity Placard - Modification .................................................................6
DCA/CESS185/128 Induction Airbox Seal - Inspection ................................................................................6
DCA/CESS185/129 Flexible Fuel Tanks - Inspection ...............................................................................6
DCA/CESS185/130A Fuel Cap - Modification ..........................................................................................7
DCA/CESS185/131 Electrical System - Modification ..............................................................................7
DCA/CESS185/132 Alternator Installation - Modification and Inspection ..............................................7
DCA/CESS185/133 Aileron Hinge Pin Installation - Inspection .................................................................8
DCA/CESS185/134 Bladder Type Fuel Cells - Inspection And Modification ...........................................8
The State of Design ADs listed below are available directly from the National Airworthiness Authority (NAA) websites. Links to NAA websites are available on the CAA website at http://www.caa.govt.nz/airworthiness-directives/states-of-design/ If additional NZ ADs need to be issued when an unsafe condition is found to exist in an aircraft or aeronautical product in NZ, they will be added to the list below.

- DCA/CESS185/135A  Cancelled – DCA/CESS185/147 refers
- DCA/CESS185/136  Cargo pod Installations - Modification
- DCA/CESS185/137  Instrument Panel Light Rheostat - Replacement
- DCA/CESS185/138  Fuel, Oil or Hydraulic Hose - Removal
- DCA/CESS185/139  Wing Extension STC SA00276NY - Inspection
- DCA/CESS185/140  Skis Installed per STC SA213AL – Modification and Placard
- DCA/CESS185/141  Preflight Fuel System Check - Flight Manual Revision
- DCA/CESS185/142  Fuel Strainer Assembly – Inspection
- DCA/CESS185/143A  Fuel Tank Selector Cover - Installation
- DCA/CESS185/144  Shoulder Harness – Inspection & Modification
- DCA/CESS185/145  Alternate Static Source Selector – Inspection
- DCA/CESS185/146  Alternate Static Source Selector – Inspection
- DCA/CESS185/147  Seat Adjustment Mechanism – Inspection and Replacement
- 2020-21-22  Tailcone and Horizontal Stabiliser – Inspection
DCA/CESS185/101  Cancelled

DCA/CESS185/102  Cancelled

DCA/CESS185/103  Fuel Drain Line Relocation - Modification
Applicability:  Model 185 Series with S/N 1850002 through 1850159.
Requirement:  Comply with Cessna SL 185-6.
Compliance:  Within the next 100 hours TIS.
Effective Date:  31 December 1966

DCA/CESS185/104  Cancelled: Purpose fulfilled

DCA/CESS185/105  Cancelled – DCA/ROLE/3 refers
Effective Date:  24 September 2015

DCA/CESS185/106  Cancelled: purpose fulfilled

DCA/CESS185/107  No. 5 Cylinder Baffle - Modification
Applicability:  Model 185 Series S/N 1850002 through 1850745.
Requirement:  Comply with Cessna SL 64-32.
Compliance:  Within the next 100 hours TIS.
Effective Date:  31 December 1966

DCA/CESS185/108  Cancelled

DCA/CESS185/109A  Cancelled

Note:  This AD was originally issued as a result of MLG spring leg failures to ski and agricultural aircraft operating in NZ. The AD has been cancelled following an investigation into its effectiveness at preventing failure of the MLG spring legs. Cessna has advised that the magnetic particle inspection is unlikely to be effective in detecting cracks before they reach the critical length. Also, repetitive paint removal from the legs to perform the inspection, may be harmful to the surface of the leg. To ensure the continuing airworthiness of the spring legs, maintenance is important to provide and maintain a good paint surface to protect the legs from corrosion or stone damage.

DCA/CESS185/110  Mainplane Rear Spar Cracking - Inspection
Applicability:  Model 185 Series All S/N’s
Requirement:  1. Examine each mainplane rear spar for cracks in the area of the root attachment fitting. Cracking originates around the spar web radius below the root end fitting, and may extend to the spar upper flange at the outboard end of the root fitting where the reinforcing angle is jogged.

2. The rear spar web may be examined after the wing root lower fairings are removed. If a crack is present it may be obscured by the root ribs and the spar root end fittings. Careful inspection should be made of the inboard edge and radius of the spar web visible below the root fittings and inboard of the root ribs. The edge of the rear spar upper flange should be inspected through the inboard inspection hole behind the rear spar. Where doubt exists, the trailing edge of the root end rib shall be removed to permit a more detailed inspection.

Compliance:  At intervals not exceeding 100 hours TIS and immediately following any case of mainplane damage or ground looping.
Effective Date:  31 December 1966
DCA/CESS185/111  Propeller Governor - Replacement
Applicability: Model 185 Series S/N 1850235 through 1850264.
Effective Date: 31 December 1966

DCA/CESS185/112A  Cancelled: purpose fulfilled

DCA/CESS185/113  Seat Belt Attachment - Modification
Applicability: Model 185 Series S/N 1850238 through 1850683.
Requirement: Comply with Cessna SL 64-6.
Compliance: Next periodic inspection.
Effective Date: 31 December 1966

DCA/CESS185/114  Cancelled

DCA/CESS185/115  Battery Cable Re-Route - Modification
Applicability: Model 185 Series S/N 1850760 through 1850776.
Requirement: Comply with Cessna SL 64-44, Item 2.
Compliance: Next periodic inspection.
Effective Date: 31 December 1966

DCA/CESS185/116  Cancelled

DCA/CESS185/117  Stall Warning Horn Improvement - Modification
Applicability: Model 185 Series S/N 1851198 through 1851429.
Requirement: Comply with Cessna SESL SE 68-22 and Supl. 1.
(FAA AD 68-17-04 refers)
Compliance: Within the next 100 hours TIS.
Effective Date: 30 April 1969

DCA/CESS185/118B  Cancelled: Purpose fulfilled by DCA/CESS185/120

DCA/CESS185/119  Cancelled: Included in DCA/CESS185/120

DCA/CESS185/120  Throttle Control Bellcrank Assembly - Modification
Applicability: Model 185 Series All S/N’s
Requirement: Comply with Cessna SESL SE 68-28 & Supl. 1.
Compliance: 1. Model A185 before further flight.
   2. Model 185 next periodic inspection.
Effective Date: 30 June 1969

Note: Rex Aviation (NZ) Ltd. Mod. RA-240 shaft is an approved equivalent to Cessna shaft P/N 0750173-2. If throttle or mixture control rods have been modified to Rex aviation (NZ) Ltd. Mod RAL 149, the belcrank s fitted under the requirement of DCA/CESS185/120 must be bushed in accordance with Rex Aviation (NZ) Ltd mod AD-56.
DCA/CESS185/121  Throttle Control Linkage - Modification

Applicability: Model 185 Series S/N 1850002 through 8502027

Requirement:
1. Fit spring, Continental P/N 628371 between air to fuel lever P/N 625228 and fuel metering lever P/N 539989.
2. Check engine speed is approximately 2300 rpm on ground with throttle control disconnected.

Compliance: Next periodic inspection

Effective Date: 30 June 1969

DCA/CESS185/122  Cancelled: DCA/GEN/5 refers

DCA/CESS185/123  Main Gear - Wheel Assembly Through Bolts - Inspection and Modification

Applicability: Model A185 Series S/N 18502091 through 18502431

Requirement:
1. Inspect main gear wheel assemblies for broken through bolts, replace broken bolts with serviceable bolts of the same type or modify as follows.
2. Modify main gear wheel assemblies by incorporating Cessna Parts Kit P/N PL-30403 in accordance with Cessna SESL SE 74-8 & Supl. 1.

Compliance: Modification shall be incorporated not later than 31 August 1974

Effective Date: 6 June 1974

DCA/CESS185/124  Main Gear - Wheel Assembly Cap Screws - Inspection and Modification

Applicability: All model 185 Series fitted with McCauley wheels P/N D-30291 AND wheels modified per DCA/CESS185/123

Requirement:
As a result of a local failure accomplish the following:
1. (a) Dismantle each wheel and inspect the six tapped holes in each side of the hub for evidence of thread distress.
   (b) Inspect the area around each hole for cracks using a dye penetrant method.
   (c) Reject any hub with damaged threads or cracks.
   (d) Reassemble in accordance with McCauley SB WB-1-A (Cessna SESL SE 74-8 & Supl. 1 refers) but use lock washers P/N AN935-516 under the heads of the cap screws instead of plain washers P/N A-1638-1.
2. (a) Check that each socket head cap screw torque is within range 190 in. lb. to 200 in. lb.
   (b) If any cap screw is less than 190 in. lb. repeat 1 above and report the defect to the Director of the Civil Aviation Authority.

Compliance: 1. Within the next 10 hours TIS
   2. At intervals not exceeding 50 hours TIS

Effective Date: 1 November 1974
DCA/CESS185/125  Throttle/Mixture Control Cable Attachment - Inspection
Applicability:  Model 185 Series S/N 18502008 through 18502726
equipped with 300 HP Continental 10-520-D engine
Requirement:  Comply with Cessna SESL SE 74-20 and SE 75-9
Compliance:  Unless already accomplished, within the next 100 hours TIS and thereafter at
intervals not exceeding 100 hours TIS
Effective Date:  2 June 1975

DCA/CESS185/126  Induction Air Duct - Replacement
Applicability:  Model A185 Series S/N 18502008 through 18502650
Requirement:  Comply with Cessna SESL SE 75-5.
(FAA AD 75-09-06 refers)
Compliance:  By 30 July 1975

DCA/CESS185/127A  Fuel Cell Capacity Placard - Modification
Applicability:  Model 185 Series S/N 18502263 through 18502653
AND any other 185 S/N aircraft in which original fuel cells have been replaced with
fuel cells manufactured in June 1973 or later
Requirement:  Comply with Cessna SESL SE 75-7 & Supl. 1.
(FAA AD 75-16-01 refers)
Compliance:  Within the next 100 hours TIS
Effective Date:  15 October 1975

DCA/CESS185/128  Induction Airbox Seal - Inspection
Applicability:  Model 185 Series S/N 18500001 through 18501832
Requirement:  Comply with Cessna SESL SE 76-18.
(FAA AD 77-04-05 refers)
Compliance:  Within the next 50 hours TIS
Effective Date:  31 March 1977

DCA/CESS185/129  Flexible Fuel Tanks - Inspection
Applicability:  Model 185 Series S/N 1850238 through 18501934
AND any other model 185 aircraft equipped with Goodyear BTC-39 series fuel tank
Requirement:  Accomplish the following:
2.  Detailed inspection per Part B of Cessna SESL SE 78-10 & Supl. 1 followed by
Part C as necessary.
(Goodyear SB FT-77-1 and FAA AD 78-05-06 also refer)
Compliance:  1.  Within the next 25 hours TIS or 30 days whichever is the sooner.
2.  Within the next 100 hours TIS or 6 months whichever is the sooner, thereafter at
intervals not exceeding 12 months.
Effective Date:  28 April 1978
DCA/Cessna 185 Series

DCA/Cessna 185/130A Fuel Cap - Modification

Applicability: Model 185 and A185 Series S/N 18500001 through 18504424

Requirement: Fit vented fuel caps with related adapters and fuel servicing placards per Cessna SEB 92-27.

(FAA AD 79-10-14 R1 refers)

Compliance: Within the next 100 hours TIS unless already accomplished

Effective Date: DCA/Cessna 185/130A - 20 December 1996

DCA/Cessna 185/131 Electrical System - Modification

Applicability: Model 185 Series S/N 18500968 through 18503458

Requirement: To prevent inflight electrical system failure, smoke in cockpit and/or fire in wire bundle behind instrument panel, accomplished the following:

Disconnect at ammeter or electrical system bus, as applicable, wire which connects bus to cigar lighter receptacle (wire is connected to either the bus side, or equipment side of a circuit breaker, or to the ammeter) then either:

1. Reconnect wire to bus using an existing or newly installed circuit protection device properly rated for wire gauge used, or
2. disconnect wire from lighter receptacle and remove it from aircraft, or
3. insulate disconnected end of wire and secure it to bundle in which it is routed.

(FAA AD 79-08-03 refers)

Note: FAA AC 43.13-1A contains guidance information on wire gauge/circuit protection device ratings

Compliance: Within next 100 hours TIS

Effective Date: 29 June 1979

DCA/Cessna 185/132 Alternator Installation - Modification and Inspection

Applicability: Model 185 and A185 Series S/N 18501096 through 18503619

Requirement: 1. Install either additional ground strap per Cessna SESIL SE 79-59 or embody Cessna service kit SK-210-84 per SESIL SE 79-5.

2. Visually inspect alternator installation for, and if necessary provide, at least ½ inch clearance between alternator and adjacent flammable fluid carrying lines power plant controls and electrical wiring.

3. Visually inspect existing alternator to airframe ground for proper installation (SE 79-59 view A-A refers), evidence of looseness at the terminal and adequate length to allow for relative motion between alternator and airframe. Also, confirm that ground straps between engine and airframe mount are installed and provide continuity between engine and mount. Correct any unsatisfactory conditions found per FAA AC 43.13-1A

(FAA AD 79-25-07 refers)

Compliance: Within the next 50 hours TIS unless already accomplished

Effective Date: 8 February 1980
DCA/CESS185/133  Aileron Hinge Pin Installation - Inspection

Applicability:  Model A185 Series S/N 18503684 through 18504400

Requirement:  Inspect per Cessna SIL SE 83-18 and rectify defective installations as prescribed
              (FAA AD 83-22-06 refers)

Compliance:  Within the next 100 hours TIS unless already accomplished

Effective Date:  16 December 1983

DCA/CESS185/134  Bladder Type Fuel Cells - Inspection And Modification

Applicability:  Model 185 Series S/N 1850001 through 18504424

With bladder type fuel cells

Requirement:  To preclude possible power loss or engine stoppage due to water contamination of
              fuel system, accomplish the following:

1. Inspect fuel tank filler areas and caps for proper sealing, check fuel cap seal by
   actuating locking tab and noting that force is maintained between cap seal and
   adaptor when tab is in over-centre locked position, or accomplish leak test per
   Cessna SIL SE 82-34.

   Note: No longer required when raised neck fuel caps installed per Cessna SK 182-85
         (SIL SE 84-16 refers)

2. Inspect fuel cell for wrinkles per Cessna SIL SE 84-4. If wrinkles found, modify
   and rework fuel cell per Cessna SIL SE 84-9 within the next 100 hours TIS.

   Note: No longer required when modification embodied.

3. Install quick drains in fuel tank sumps and reservoirs where applicable, per
   Cessna SILs SE 79-45 and SE 84-8.

   (FAA AD 84-10-01 R1 refers)

Compliance:  1 and 2 inspections - within next 50 hours TIS and thereafter at intervals not
              exceeding 12 months.

            3. Modification - within next 100 hours TIS

Effective Date:  27 July 1984

DCA/CESS185/135A  Cancelled – DCA/CESS185/147 refers

Effective Date:  30 June 2011
**DCA/CESS185/136  Cargo pod Installations - Modification**

**Applicability:** All model 185 Series with cargo pod installation

**Requirement:** To prevent safe operation of aircraft from being hazarded as a result of a cargo pod installation accomplish the following per approved modifications:

1. Embody tie-down rings which enable cargo to be restrained and so prevent shifting in flight.
2. Install cowlung flap extensions which ensure that engine operating temperatures are maintained within manufacturers limits.
3. Install placards detailing pod loading instructions, fuel drain location and possible effect of pod on ADF bearing accuracy (as applicable).
4. Ensure that approved Flight Manual amendments concerning pod installation are embodied.

**Compliance:** Within the next 50 hours TIS, or by 30 November 1988 whichever is the sooner

**Effective Date:** 7 October 1988

**DCA/CESS185/137  Instrument Panel Light Rheostat - Replacement**

**Applicability:** Model 185 Series S/N 185-0777 through 18502310.

**Requirement:** To prevent an in-flight fire caused by a short circuit in the electrical wiring controlled by the instrument panel light dimming rheostat, accomplish the following:-

Replace the existing rheostat with one of improved design that is current limited and heat protected, P/N RD-0015H-1600, per Cessna SEB92-33R2.

(FAA AD 93-24-15 refers)

**Compliance:** By 30 September 1994

**Effective Date:** 18 March 1994

**DCA/CESS185/138  Fuel, Oil or Hydraulic Hose - Removal**

**Applicability:** All model 185 series, all S/Ns.

**Requirement:** To prevent fuel, oil or hydraulic systems failure caused by a collapsed hose, check the aircraft maintenance records for any fuel, oil or hydraulic hose, Cessna P/N S51-10, replaced between March 1995 and 14 March 1997. If any fuel, oil or hydraulic hose, Cessna P/N S51-10, has been replaced between March 1995 and 14 March 1997, accomplish the following:-

Before further flight physically check for a diagonal or spiral external reinforcement wrap per Cessna SB SEB96-15. Replace any P/N S51-10 hose that has a diagonal or spiral pattern external reinforcement wrap with a P/N S51-10 hose that has a criss-cross pattern external wrap per SB SEB96-15.

(FAA AD 97-01-13 refers)

**Compliance:** Within next 60 hours TIS or 60 days, whichever is the sooner.

**Effective Date:** 14 March 1997
DCA/CESS185/139  Wing Extension STC SA00276NY - Inspection

Applicability: Models 185, 185A, 185B, 185C, 185D, 185E, A185E and A185F that have wing extension supplemental type certificate (STC) SA00276NY or supplemental type approval (STA) SA93-136 incorporated. The STA is the Canadian version of the U.S. STC.

Requirement: To prevent wing failure during flight caused by the absence of an angle stiffener, and loss of the aircraft, accomplish the following:-

Inspect inside the left and right wings, aft of the spar, closest to where the strut connects to the wing, for an angle stiffener along the lower spar cap between Wing Station (W.S.) 90 and W.S. 110 per Part A of the Accomplishment Instructions of Air Research Technology, Inc. (ART) SB-1-96, Issue 1, dated April 11, 1996.

If an angle stiffener is not installed, prior to further flight, install a stainless steel reinforcement strap on the underside of each wing, along the spar at W.S. 100.50 per Part B of the Accomplishment Instructions of ART SB-1-96, Issue 1, dated April 11, 1996.

(FAA AD 98-16-04 refers)

Compliance: Within next 50 hours TIS.

Effective Date: 25 September 1998

DCA/CESS185/140  Skis Installed per STC SA213AL – Modification and Placard

Applicability: Models 185, 185A, 185B, 185C, 185D, 185E, A185E, and A185F that have either Airglas Engineering Company Inc, (AECI) Model LW3600-180 (single position) or Model LW3600-180A (two position) fixed penetration wheel skis installed per Supplemental Type Certificate (STC) SA213AL.

Requirement: To prevent one or both wheel skis from rotating into a nose-down position during flight, which could result in loss of control of the aircraft and/or possible damage during flight or landing, accomplish the following:-

(b) Fabricate a placard using letters at least 1/8-inch in height and install this placard adjacent to the airspeed indicator, per AECI Drawing No. LW3600-180A-11, originally issued: September 21, 1979, and AECI SB No. LW3600-3, originally issued: September 21, 1979; Amended: October 10, 1997.

(c) Re-mark the airspeed indicator to display the never exceed airspeed (160 KIAS) and the maximum structural cruising speed (139 KIAS) with skis installed, per AECI SB No. LW3600-3, originally issued: September 21, 1979; Amended: October 10, 1997.

(FAA AD 98-23-02 refers)

Compliance: Within the next 50 hours TIS.

Effective Date: 18 December 1998
DCA/CESS185/141  Preflight Fuel System Check - Flight Manual Revision

Applicability:  Model 185, 185A, 185B, 185C, 185D, 185E, A185E and A185F (S/N 632, 185-0001 through 185-1599, 18501600 and on) equipped with fuel reservoir(s).

Requirement:  To preclude possible power loss or engine stoppage due to fuel contamination, insert the following paragraphs into the aircraft flight manual. Alternatively, a manufacturer’s flight manual revision with the same wording is acceptable.

(FAA AD 86-19-11 refers)

PILOT OPERATING PROCEDURES - PREFLIGHT FUEL SYSTEM CHECK

Fuel sampling: Fuel strainer, wing tank and reservoir quick drains.

1. Place a suitable container under the fuel strainer drain outlet prior to operating the strainer drain control for at least 4 seconds. Check strainer drain closed.

2. Inspect the fluid drained from the fuel strainer and each wing tank quick drain for evidence of fuel contamination in the form of water, rust, sludge, ice or any other substance not compatible with fuel. Also check for proper fuel grade before the first flight of each day and after each refueling. If any contamination is detected, comply with 4 below. If any contamination is detected, comply with 4 below.

3. Repeat Steps 1 and 2 on each wing tank quick drain.

4. If the aircraft has been exposed to rain, sleet or snow, or if the wing fuel tanks or fuel strainer drains produce water, the fuel reservoir(s) must be checked for the presence of water by operating the fuel reservoir quick drains. The aircraft fuel system must be purged to the extent necessary to insure that there is no water, ice or other fuel contamination.

NOTE 1: The fuel reservoir(s) are located under the fuselage between the firewall and forward door post on all airplane models. Consult the pilot's Aircraft Flight Manual, Operating Handbook or Owners Manual in order to determine if one or two reservoir(s) are installed.

NOTE 2: A check for the presence of water using the fuel reservoir quick drains prior to the first flight of each day is considered good operating practice.

DCA/CESS185/141 refers

Compliance:  By 1 February 2000

Effective Date:  19 November 1999

DCA/CESS185/142  Fuel Strainer Assembly – Inspection

Applicability:  Models 185D, 185E, A185E and A185F that have fitted a Cessna P/N 0756005-2 top assembly, P/N 0756005-8 fuel strainer assembly, or a P/N 0756005-9 fuel strainer assembly shipped from Cessna between 12 December 1996, and 5 September 1997.

Note:  All aircraft S/Ns, including those manufactured in France that have a capital "F" or "FR" prefix on the model number.

Requirement:  To prevent foreign material from entering the fuel system and engine, which could result in loss of engine power or complete engine stoppage during flight, accomplish the following:

1. Measure the standpipe in the fuel strainer assembly (tube in the filter strainer top assembly) for a visible maximum length of 1.68 inches, per Cessna SEB 97-9 If the standpipe measures greater than 1.68 inches, prior to further flight, replace the filter strainer top assembly per SEB 97-9.

2. Do not fit to any aircraft a fuel strainer assembly where the standpipe measures greater than 1.68 inches.

(FAA AD 2000-06-01 refers)

2. From 27 April 2000.
Effective Date: 27 April 2000

DCA/CESS185/143A Fuel Tank Selector Cover - Installation

Applicability: All model 185 series with a 3-position fuel tank selector.

Requirement: To prevent inadvertent fuel shut-off, inspect cockpit fuel tank selector. If the fuel tank selector cover with raised perimeter (such as P/N 0716114 any dash number) is not fitted, fit cover before further flight.

Compliance: By 30 September 2002

Effective Date: DCA/CESS185/143 – 25 July 2002
DCA/CESS185/143A – 29 August 2002

DCA/CESS185/144 Shoulder Harness – Inspection & Modification

Applicability: Model 185 aircraft, S/N 632 and 185-0001 through 185-0237,
Model 185A aircraft, S/N 185-0238 through 185-0512,
Model 185B aircraft, S/N 185-0513 through 185-0653,
Model 185C aircraft, S/N 185-0654 through 185-0776,
Model 185D aircraft, S/N 185-0777 through 185-0967,
Model 185E aircraft, S/N 185-0968 through 185-1149,
Model A185E aircraft, S/N 185-0968 through 185-1599 and 18501600 through 18501832,
which have incorporated Cessna Mod Kit AK182-75.

Requirement: To prevent slippage of the pilot and copilot shoulder harness, which could result in serious injury to the pilot and copilot, accomplish the following:

1. Inspect the upper shoulder harness adjuster P/N 443030-401 for the presence of a retainer spring, in accordance with Cessna Single Engine Service Bulletin SEB86-8, Revision 1.

2. If a retainer spring is found during the inspection of the upper shoulder harness adjuster, prior to further flight remove the spring by cutting each side; and stamp out the -401 identification number in accordance with Cessna Single Engine Service Bulletin SEB86-8, Revision 1

3. If a retainer spring is not found during the inspection of the upper shoulder harness adjuster, make an entry in the airplane log book showing compliance with this AD.

4. Only incorporate Cessna Accessory Kits that have been inspected and modified in accordance with this AD.

(FAA AD 2004-19-01 refers)

Compliance: Within the next 100 hours TIS

Effective Date: 25 November 2004

DCA/CESS185/145 Alternate Static Source Selector – Inspection

Note 1: P/N 2013142-18 superseded P/N 2013142-9, -13 and -17.

Requirement: To prevent erroneous indications from the altimeter, airspeed and vertical speed indicator which could cause the pilot to react to incorrect flight information and possibly result loss of aircraft control, accomplish the following:

1. Inspect the alternate static air source selector valve and establish whether the static air port on the forward end of the valve is clearly visible and not covered by the P/N identification placard.
If the static air port is found covered by the P/N identification placard, remove the placard from the selector valve body and ensure the port is open and unobstructed. Discard the placard and record the P/N of the alternate static air source selector valve in the aircraft logbook.

**Note 2:**

If the alternate static air source selector valve port is found covered by the P/N identification placard, submit a defect report form CA005D to the Civil Aviation and provide the aircraft model, S/N and aircraft TTIS.

2. Before fitting an alternate static air source selector valve P/N 2013142–18 to any aircraft, accomplish requirement 1 of this AD.

(FAA AD 2008-10-02 refers)

**Compliance:**

1. Before further flight.

**Effective Date:** 12 May 2008

DCA/CESS185/146  Alternate Static Source Selector – Inspection

**Applicability:** Model 185, 185A, 185B, 185C, 185D, 185E, A185E and A185F aircraft, all S/N manufactured between 1 January 1993 and 31 March 2008, or fitted with an alternate static air source selector valve P/N 2013142-18 as a replacement part between 1 January 1993 and 31 March 2008, unless already in compliance with DCA/CESS185/145.

**Note 1:** This AD includes aircraft not previously affected by DCA/CESS185/145 and all those aircraft fitted with an alternate static air source selector valve P/N 2013142-18 between 1 January 1993 and 31 March 2008. Alternate static air source selector valve P/N 2013142-18 replaced P/N 2013142-9, -13 and -17.

**Requirement:** To prevent erroneous indications from the altimeter, airspeed and vertical speed indicator which could cause the pilot to react to incorrect flight information and possibly result in loss of aircraft control, accomplish the following:

1. Inspect the alternate static air source selector valve and establish whether the static air port on the forward end of the valve is clearly visible and not covered by the P/N identification placard per the procedures in Cessna Single Engine SB SB08-34-02 revision 1 dated 6 October 2008, Cessna Caravan SB CAB08-4 revision 1 dated 6 October 2008, Cessna Single Engine SB SEB08-5 dated 13 October 2008 or Cessna Multi-engine SB MEB08-6 dated 13 October 2008, as applicable. If the static air port is found covered by the P/N identification placard, remove the placard from the selector valve body and ensure the port is open and unobstructed. Discard the placard and record the P/N of the alternate static air source selector valve in the aircraft logbook.

2. Before fitting an alternate static air source selector valve P/N 2013142–18 to any aircraft, accomplish requirement 1 of this AD.

**Note 2:** If the alternate static air source selector valve port is found covered by the P/N identification placard, submit a defect report form CA005D to the Civil Aviation and provide the aircraft model, S/N and aircraft TTIS.

(FAA AD 2008-26-10 refers)

**Compliance:**

1. By 3 February 2009 for IFR aircraft, and within the next 100 hours TIS or by 23 May 2009 whichever occurs sooner for non IFR aircraft.

**Effective Date:** 23 January 2009
DCA/CESS185/147  Seat Adjustment Mechanism – Inspection and Replacement

Applicability: Model 185, 185A, 185B, 185C, 185D, 185E, A185E and A185F aircraft, all S/N.

Note 1: This AD supersedes DCA/CESS185/135A to introduce additional inspection requirements, to improve the clarity of the required inspections, and provide improved figures/graphics. The FAA continue to receive reports of inadvertent seat movement. These reports included an incident of a seat separating from the seat track due to wear of the seat roller housing tangs.

Requirement: To prevent seat slippage or disengagement of the seat roller housing from the seat rail which could result in the pilot/copilot being unable to reach all the controls and loss of aircraft control, accomplish the following:

Accomplish the inspections and corrective actions in FAA AD 2011-10-09 on the seat rails; seat rollers, washers, and axle bolts or bushings; seat roller housings and the tangs; and the lock pin springs.

Note 2: A copy of FAA AD 2011-10-09 can be obtained from the FAA website at: http://rgl.faa.gov/Regulatory_and_Guidance_Library/rgAD.nsf/MainFrame?OpenFrameSet

(FAA AD 2011-10-09 refers)

Compliance: Within the next 100 hours TIS after the last inspection accomplished per DCA/CESS185/135A (FAA AD 87-20-03 R2 refers) or by 30 June 2012 whichever occurs sooner, and thereafter at intervals not to exceed 100 hours TIS or every 12 months whichever occurs sooner.

Effective Date: 30 June 2011
The State of Design ADs listed below are available directly from the National Airworthiness Authority (NAA) websites. Links to NAA websites are available on the CAA website at http://www.caa.govt.nz/airworthiness-directives/states-of-design/

If additional NZ ADs need to be issued when an unsafe condition is found to exist in an aircraft or aeronautical product in NZ, they will be added to the list below.

* 2020-21-22 Tailcone and Horizontal Stabiliser – Inspection

Applicability: Model 185, 185A, 185B, 185C, 185D, 185E, A185E and A185F aircraft, all S/N.

Effective Date: 7 December 2020
