**Applicability:** Model MBB-BK117 C-2 aircraft, all S/N fitted with an Intermediate Gearbox (IGB) bevel gear P/N 4639 310 065.

**Note:** This AD revised editorially to clarify the applicability with no change to the AD requirement.

**Requirement:** To prevent failure of the Intermediate Gearbox (IGB) bevel gear which can result in loss of aircraft control, accomplish the following:

1. Determine the S/N of the bevel gear P/N 4639 310 065 fitted in the aircraft IGB per Eurocopter Deutschland ASB MBB BK117 C-2-04A-005 revision 02, dated 28 April 2010 or later EASA approved revisions.

If the IGB is not fitted with a bevel gear with a S/N listed in table 1 of ASB MBB BK117 C-2-04A-005 no further action is required.

If the IGB is fitted with a bevel gear with a S/N listed in table 1 of ASB MBB BK117 C-2-04A-005, amend the aircraft maintenance programme with the reduced life limit per ASB MBB BK117 C-2-04A-005, and replace the affected bevel gear with a serviceable part before reaching the reduced life limit per the instructions in ECD ASB MBB BK117 C-2-04A-005.
If the IGB is fitted with an affected bevel gear which has already exceeded the reduced life limit, replace the affected bevel gear with a serviceable part per ASB MBB BK117 C-2-04A-005 before further flight.

2. A bevel gear P/N 4639 310 065 with an affected S/N listed in Table 1 of ECD ASB MBB BK117 C-2-04A-005 shall not be fitted to any aircraft unless the requirements of this AD have been accomplished.

DCA/MBB117/26 A Instrument Control Panel – Flight Limitation, Placard and Modification

Note 1: No action required if the aircraft is already in compliance with DCA/MBB117/26. This AD revised to introduce the option to replace affected ICP with an ICP embodied with modification standard ‘Amdt. C’ as an acceptable method of compliance with the modification requirements of this AD.

Requirement:
To prevent unintentional turning of BARO rotary knobs on certain Instrument Control Panels (ICP) due to insufficient turn resistance which can result in erroneous altitude information and increase the risk of flight into terrain during IFR operation, accomplish the following:

1. Review the aircraft records or inspect the aircraft and determine the S/N of the ICP P/N C19269AA installed on the aircraft.
   
   If an affected ICP is found installed on the aircraft, install a placard with text “Single Pilot IFR Operation Prohibited” on the instrument panel in full view of the pilots before further flight per the instructions in ECD ASB MBB BK117 C-2-31A-041 revision 2, dated 23 May 2011 or later approved revisions and inform the flight crew.

2. Modify the ICP per the instructions in ASB MBB BK117 C-2-31A-041, or replace the ICP with a unit embodied with modification standard ‘Amdt. C’ or higher, and remove the placard introduced by requirement 1 of this AD.

3. An affected ICP shall not be fitted to any aircraft unless the ICP has been modified per the instructions in ASB MBB BK117 C-2-31A-041 or unless the ICP is embodied with modification standard ‘Amdt. C’ or higher.

Note 2: ICP P/N C19269AA with S/N E2401 through to E2999 have been modified by ECD per the requirements of this AD prior to installation on an aircraft, or prior to despatch as a replacement unit. The ICP manufacturer (Thale) has informed ECD that ICP units from S/N E3000 onwards have been embodied with modification standard ‘Amdt. C’ at production. Existing units can be returned to Thales for modification to this standard.

Note 3: Eurocopter Deutschland GmbH (ECD) ASB MBB BK117 C-2-31A-041 revision 2, dated 23 May 2011 or later approved revisions is acceptable to comply with the requirements of this AD.

DCA/MBB117/28  Main Rotor Controls – Inspection
Applicability: Model MBB-BK 117 C-2 helicopters, all S/N.
Requirement: To prevent incorrect rigging resulting in impaired freedom of movement of the upper main rotor controls with reduced helicopter control, accomplish the following:

1. Revise the AFM and introduce the following text into section 5.1.9 Performance of the AFM.

"For hover out of ground effect in density altitudes up to 7000 ft, controllability has been demonstrated for winds up to 30 kts, except for winds from the right-rear side, where 20 kts has been demonstrated, and except for winds from the left-rear side, where 12 kts has been demonstrated. For hover out of ground effect in density altitudes above 7000 ft, controllability has also been demonstrated for winds up to 30 kts, except for winds from the right to the right-rear side, where 17 kts has been demonstrated, and except for winds from the left-rear side, where 12 kts has been demonstrated."

Revise the AFM and introduce the information in appendix 2 of EASA AD 2010-0248 into the AFM supplement 9.2-11 "External Hoist System", as applicable.

Note 1:
Requirement 1 of this AD may be accomplished by inserting a copy of appendices 1 and 2 of EASA AD 2010-0248 into the AFM.

2. Inspect the rigging of the power boosted section of the main rotor controls per the instructions in ECD ASB MBB BK117 C-2-67A-012 dated 16 September 2010 or later EASA approved revisions.

If improper rigging is found, correct the rigging per the instructions in TR 12b dated 16 September 2010 of the MBB-BK117 C-2 AMM.

When the inspection and corrective actions per requirement 2 have been accomplished, remove the AFM changes introduced by requirement 1 of this AD.

3. Any scheduled or unscheduled rigging of the power boosted section of the main rotor controls must be accomplished per the instructions in TR 12b of the MBB-BK117 C-2 AMM.

Note 2:
Compliance with requirements 3 of this AD can be accomplished by revising the Aircraft Maintenance Programme by incorporating the rigging instructions contained in ECD TR 12b of MBB BK117 C-2 AMM.
